WORK COVERED BY CONTRACT DOCUMENTS

The Work of Project is defined by the Contract Documents and consists of the following:

The project will be for Bergen Community College's Athletic Fields.

Baseball Field Renovations (Fall 2021): New Baseball dugouts, bleachers, fencing, concrete pads and walkways.

- Type of Contract B.
 - constructed under a single prime contract. 1. Project will o
- ACCESS TO SITE 1.4
 - Use of Site: Limit use of Project sile to areas within the Contract limits indicated. Do not disturb A. portions of Project site beyond areas in which the Work is indicated.
 - Limits: Confine construction openations to areas of campus designated for construction 1. and use by Contractor. Coordinate this tem with Owner at Pre Construction Meeting.
 - Driveways, Walkways and Entrances: Keep driveways and entrances serving premises 2. clear and available to Owner, Owner's staff, and emergency vehicles at all times. Do not use these areas for parking or storage of material

1.5 COORDINATION WITH OCCUPANTS

- Full Owner Occupancy: Owner will occupy site and adjacent building(s) during entire A. construction period. Cooperate with Owner during construction operations to minimize conflicts and facilitate Owner usage. Perform the Work so as not to interferentiate Owner's day-to-day operations. Maintain existing exits unless otherwise indicated.
 - Maintain access to existing warking facilities. Do not close or obstruct walkways, connect facilities without written permission from Owner and approval or and jurisdiction. Notify Owner not less than 72 hours in advance of activities that will affect Owner's operations. 1.
 - 2.

1.6 WORK RESTRICTIONS

Work Restrictions, General: Comply with restrictions on construction operations. A.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- Comply with limitations on use of public streets and with other requirements of 1. authorities having jurisdiction.
- OP IN'S On-Site Work Hours: Limit work in the existing building to normal business working hours of 7:00 a.m. to 10:00 p.m., Monday through Friday, unless otherwise indicated.

Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by Owner or others unless permitted under the following conditions and then only after providing temporary utility services according to requirements indicated:

Notify Owner not less than two days in advance of proposed utility interruptions. Obtain Owner's written permission before proceeding with utility interruptions.

- Noise Bration, and Odors: Coordinate operations that may result in high levels of noise and D. vibration, ocloss, or other disruption to Owner occupancy with Owner.
 - Notify Owner not less than two days in advance of proposed disruptive operations. 1.
 - 2. Obtain Owner's written permission before proceeding with disruptive operations.
- Controlled Substances Us) of tobacco products and other controlled substances on Project site E. is not permitted.

SPECIFICATION AND DRAWING CONVENTIONS 1.7

- Specification Content: The Specification we certain conventions for the style of language and Α. the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
 - Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with depending on the context, are implied 1. where a colon (:) is used within a sentence or phrase
 - Specification requirements are to be performed by Contactor unless specifically stated 2. otherwise.
- Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work B. of all Sections in the Specifications.
- Drawing Coordination: Requirements for materials and products identified on Drawings are C. described in detail in the Specifications. One or more of the following are used op Arawings to identify materials and products:
 - 1.
 - y materials and products. Terminology: Materials and products are identified by the typical gene the individual Specifications Sections. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings. 2.

SECTION 012100 - ALLOWANCES

PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements governing allowances.

- of allowances include the following: B.
 - stingency allowances. 1
 - Testing and inspecting allowances. 2.
- Related Requirements: C.
 - Section 0140 "Quality Requirements" for procedures governing the use of allowances 1. for testing and inspecting.

SELECTION AND PURCHASE 1.2

- At the earliest practical date after award of the Contract, advise Architect of the date when final selection and purchase of each product or system described by an allowance must be completed A. to avoid delaying the Work.
- At Architect's request, obtain proposals for each allowance for use in making final selections. B. Include recommendations that are relevant to performing the Work.
- Purchase products and systems selected by Architect from the designated supplier. С.

1.3 ACTION SUBMITTALS

Submit proposals for purchase of products or systems included in allowances, in the form A. specified for Change Orders.

1.4 INFORMATIONAL SUBMITTALS

- Α.
- B.
- Submit invoices or delivery slips to show actual quantumes are use in fulfillment of each allowance. Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the allowance. C. the Work.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

COORDINATION 1.5

OP NA Coordinate allowance items with other portions of the Work. Furnish templates as required to coordinate installation.

CONTINGENCY ALLOWANCES

Use the contingency allowance only as directed by Architect for Owner's purposes and only by Change Orders that indicate amounts to be charged to the allowance.

- Contractor's overhead, profit, and related costs for products and equipment ordered by Owner B. under the contingency allowance are included in the allowance and are not part of the Contract Sum Costs include delivery, installation, taxes, insurance, equipment rental, and similar costs.
- Change Orders authorizing use of funds from the contingency allowance will include C. Contractor's related costs and reasonable overhead and profit margins.
- At Project closeout, credit unused amounts remaining in the contingency allowance to Owner D. by Change Order.

TESTING AND INSPECTING ALLOWANCES 1.7

- A. Testing and inspecting allowances include the cost of engaging testing agencies, actual tests and inspections, and reporting results.
- The allowance does not include incidental labor required to assist the testing agency or costs for B. retesting if previous tests and inspections result in fully. The cost for incidental labor to assist the testing agency shall be included in the Contract Sun
- Costs of services not required by the Contract Documents are posincluded in the allowance. C.
- At Project closeout, credit unused amounts remaining in the testing and inspecting allowance to D. Owner by Change Order.

1.8 ADJUSTMENT OF ALLOWANCES

- Allowance Adjustment: To adjust allowance amounts, prepare a Change Order ropsal based A. difference between part. rk-in-place where applicable. If applicable, menue, , tolerances, mixing wastes, normal product imperfections, and similar margins. Include installation costs in purchase amount only where indicated as part of the there and documentation to substantiate distribution of on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cuting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.
 - 1.
 - 2.
 - 3. Submit substantiation of a change in scope of work, if any, claimed in Change Orders related to unit-cost allowances.

- Owner reserves the right to establish the quantity of work-in-place by independent 4. quantity survey, measure, or count.
- B. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.
 - Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of work has changed from what could have been foreseen from information in the Contract Documents.

No change to Contractor's indirect expense is permitted for selection of higher- or lowerpriced materials or systems of the same scope and nature as originally indicated.

- Not Used) PART 2 - PRODU
- PART 3 EXECUTION

1.

- 3.1 **EXAMINATION**
 - Examine products covered by an allowance promptly on delivery for damage or defects. Return A. damaged or defective products to manufacturer for replacement.
- 3.2 PREPARATION
- ATION te materials and their installation for each a.. ons to ensure that each allowance item is completely . work. nce No. 1: Contingency Allowance: Include the sum of \$5,000.00: m. seen items such as hidden conditions or Owner requested modifications. This allowance includes material cost, receiving, handing, and installation and contractor overhead and profit. Coordinate materials and their installation for each allowance with related materials and A. installations to ensure that each allowance item is completely integrated and interfaced with related work.
 - Allowance No. 1: B. unforeseen items such as hidden conditions or Owner requested modifications.
 - 1.

END OF SECTION 012100

SECTION 012300 – ALTERNATES

PART 1 - GENERAL RELATED I

RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMAR

A. Section includes administrative and procedural requirements for alternates.

1.3 DEFINITIONS

- A. Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the Bidding Requirements that may be added to or deducted from the base bid amount if College decides to accept the Alternate as part of the awarded contract either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.
 - 1. Alternates described in this Section are part of the Work only if enumerated in the Agreement.
 - 2. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate alternate into the Work No other adjustments are made to the Contract Sum.

1.4 PROCEDURES

- A. Coordination: Modify or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.
 - 1. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.
- B. Alternates will be accepted or rejected in numerical sequence as cited in the bid documents and shall not be selected at random except as provided herein. Add alternates and deduct alternates will be specified separately. The College may choose from the add and deduct alternates without priority between the two groups so long as selection within each group is in numerical sequence from the first to the last.
- C. The Contractor agrees that the alternate pricing provided on the proposal form will be held through contract duration if not approved at the time of contract award. If the College elects to award the scope after contract award, it will be done as a change order and applicable markups as defined in the contract documents will be permitted.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- Notification: Immediately following award of the Contract, the College will notify the D. Contractor, in writing, whether each alternate has been accepted or rejected.
- E. Execute accepted alternates under the same conditions as other work of the Contract.

Schedule: A schedule of alternates is included at the end of this Section. Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate.

SECTION 012500 - SUBSTITUTION PROCEDURES

12 N PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for substitutions.

- lated Requirements: B.
 - tion 016000 "Product Requirements" for requirements for submitting comparable products submittals for products by listed manufacturers.

1.2 DEFINITIONS

Substitutions: Changes in products, materials, equipment, and methods of construction from A. those required by the Contract Documents and proposed by Contractor.

1.3 ACTION SUBMITTALS

- Substitution Requests: Submit three copies of each request for consideration. Identify product or A. fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
 - Substitution Request Form: Use form acceptable to Architect. 1.
 - 2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:
 - Statement indicating why specified product or fabrication or installation cannot be a. provided, if applicable.
 - Coordination information, including a list of changes provisions needed to other b. parts of the Work and to construction performed by gwner and separate contractors, that will be necessary to accommodate proposed substitution.
 - Detailed comparison of significant qualities of proposed substitution with those of c. the Work specified. Include annotated copy of applicable Specification Section. Significant quantes ... durability, visual effect, sustainable design e... features and requirements indicated. Indicate deviations, 11 any, ... specified. Product Data, including drawings and descriptions of products and fabrication and installation procedures. Significant qualities may include attributes such as performance, wight, size,
 - d.
 - e.
 - f.
 - g. addresses and names and addresses of architects and owners.

- Material test reports from a qualified testing agency indicating and interpreting test h. Philophile results for compliance with requirements indicated.
 - i. Research reports evidencing compliance with building code in effect for Project.
 - Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
 - Cost information, including a proposal of change, if any, in the Contract Sum.
 - Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
 - Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated eruits.
 - Architect's Agron: If necessary, Architect will request additional information or 3. documentation for evaluation within 10 days of receipt of a request for substitution. Architect will notify Contractor of acceptance or rejection of proposed substitution within 15 days of receipt of request, or 10 days of receipt of additional information or documentation, whicher er is later.
 - Forms of Acceptance: Change Order, Construction Change Directive, or a. Architect's Supplemental Instructions for minor changes in the Work.
 - Use product specified if Alchtert does not issue a decision on use of a proposed b. substitution within time allocated.

1.4 QUALITY ASSURANCE

j.

Compatibility of Substitutions: Investigate and document on atibility of proposed substitution A. with related products and materials. Engage a qualified testing agency to perform compatibility FICIAL C tests recommended by manufacturers.

PART 2 - PRODUCTS

2.1 **SUBSTITUTIONS**

- Substitutions for Cause: Submit requests for substitution immediately on discovery of ped for tutions for Cause: Suome and e, but not later than 15 days prior to time required for property ttals. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied: A. change, but not later than 15 days prior to time required for preparation and review of related submittals.
 - 1.
 - indicated results.

- Requested substitution provides sustainable design characteristics that specified b. product provided.
- Requested substitution will not adversely affect Contractor's construction schedule. c.
- Requested substitution has received necessary approvals of authorities having d. jurisdiction.
- Requested substitution is compatible with other portions of the Work. e.
- f. Requested substitution has been coordinated with other portions of the Work.
- Requested substitution provides specified warranty. g.
 - If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.
- trations for Convenience: Not allowed. B.

SECTION 012600 - CONTRACT MODIFICATION PROCEDURES

12/N PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for handling and processing ontract modifications.

MINOR CHANGES IN THE WORK 1.2

Architect will issue supplemental instructions authorizing minor changes in the Work, not A. involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions." form included in Project Manual.

1.3 PROPOSAL REQUES

- Owner-Initiated Proposal Requests: Architect will issue a detailed description of proposed A. changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.
 - Work Change Proposal Requests is by Architect are not instructions either to stop 1. work in progress or to execute the proposed change.
 - Within time specified in Proposal Request or 20 days, when not otherwise specified, after 2. receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.
 - Include a list of quantities of products required reliminated and unit costs, with a. total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
 - Indicate applicable taxes, delivery charges, equipment ental and amounts of trade b. discounts.
 - Include costs of labor and supervision directly attributable to the change. c.
 - Include an updated Contractor's construction schedule that indicates the effect of d. the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an
- e. Quotation Form: Use forms acceptable to Architect. Contractor-Initiated Work Change Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Architect. Β.
 - Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.

RSC Project No.73.19.002

- Include a list of quantities of products required or eliminated and unit costs, with total 2. amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
- Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade 3. discounts.
- 4. Include costs of labor and supervision directly attributable to the change.
- Include an updated Contractor's construction schedule that indicates the effect of the 5. change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

Comply with requirements in Section 012500 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.

Work Change Proposal Request Form: Use form acceptable to Architect.

ADMINISTRATIVE CHANGE ORDERS 1.4

OP INS,

Allowance Adjustment: See Section 012100 "Allowances" for administrative procedures for A. preparation of Change Order Proposal for adjusting the Contract Sum to reflect actual costs of allowances.

CHANGE ORDER PROCEDORES 1.5

On Owner's approval of a Work Changes Proposal Request, Architect will issue a Change Order A. for signatures of Owner and Contractor on AIA Document G701 form included in Project Manual.

1.6 CONSTRUCTION CHANGE DIRECTIVE

- Change Directive: Architect may issue a Change Directive on AIA Document G714 form A. included in Project Manual. Change Directive instructs Contactor to proceed with a change in the Work, for subsequent inclusion in a Change Order.
 - 1. Change Directive contains a complete description of charge in the Work. It also lesignates Contract Time. nentation: Maintain detailed records on a time and material con-ge Directive. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract. designates method to be followed to determine change in the contract Sum or the
- Β. Documentation: Maintain detailed records on a time and material basis of work required by the Change Directive.

CONTRACT MODIFICATION PROCEDURES

SECTION 012900 - PAYMENT PROCEDURES

12 N. PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements necessary to prepare and process polications for Payment.

- Related Requirements: B.
 - Setion012100 "Allowances" for procedural requirements governing the handling and 1. processing of allowances.
 - 2. Section 012,00 "Contract Modification Procedures" for administrative procedures for handling charges to the Contract.
 - Section 013200 "Construction Progress Documentation" for administrative requirements 3. governing the preparation and submittal of the Contractor's construction schedule.

1.2 SCHEDULE OF VALUES

- Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's A. construction schedule.
 - Coordinate line items in the schedule of alues with other required administrative forms 1. and schedules, including the following:
 - Application for Payment forms with continuation sheets. a.
 - Submittal schedule. b.
 - Items required to be indicated as separate activities in Contractor's construction c. schedule.
 - Submit the schedule of lays before the date scheduled to react the date scheduled to react the date schedule of values. Provide at least one line item for each Specification Section (Include the following Project identification on the schedule of value): 2.
- B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section
 - 1.
 - 2. Arrange schedule of values consistent with format of AIA Document G703.

- Provide a breakdown of the Contract Sum in enough detail to facilitate continued 3. evaluation of Applications for Payment and progress reports. Coordinate with Project Manual table of contents.
- 4. Round amounts to nearest whole dollar; total shall equal the Contract Sum.
- 5. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not vet installed.
 - Provide separate line items in the schedule of values for initial cost of materials, for each subsequent stage of completion, and for total installed value of that part of the Work.
 - Allowances: Provide a separate line item in the schedule of values for each allowance. Show line-item value of unit-cost allowances, as a product of the unit cost, multiplied by measured quantity. Use information indicated in the Contract Documents to determine uantities.
- wide separate line item equal to a minimum of 5 percent of total contract amount for 8. Punch List items.
- Each item in the schedule of values and Applications for Payment shall be complete. 9. Include total gost and proportionate share of general overhead and profit for each item.
 - Temporary facilities and other major cost items that are not direct cost of actual a. work-in-place may be shown either as separate line items in the schedule of values or distributed as general overhead expense, at Contractor's option.
- Schedule Updating: Update and resubmit the schedule of values before the next 10. Applications for Payment when Change Orders or Construction Change Directives result in a change in the Contract Sum

1.3 APPLICATIONS FOR PAYMENT

OP INK

6.

- Each Application for Payment shall be consistent vita previous applications and payments as A. certified by Architect and paid for by Owner.
 - Initial Application for Payment, Application for appendix at time of Substantial 1. Completion, and final Application for Payment involve additional requirements.
- Payment Application Times: The date for each progress payment is indicated in the Agreement B. between Owner and Contractor. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.
- Payment Application Times: Submit Application for Payment to Architect. The period covered C. by each Application for Payment is one month.
- D.
- Application for Payment Forms: Use AID December form for Applications for Payment. Application Preparation: Complete every entry on form. Notarize and execute by a person thereized to sign legal documents on behalf of Contractor. Architect will return incomplete E.
 - Entries shall match data on the schedule of values and Contractor's construction schedule. 1. Use updated schedules if revisions were made.

- Include amounts of Change Orders and Construction Change Directives issued before last 2. day of construction period covered by application.
- OP INK Transmittal: Submit three signed and notarized original copies of each Application for Payment to Architect by a method ensuring receipt. One copy shall include waivers of lien and similar attachments if required.
 - 1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.

Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's lien rom entities lawfully entitled to file a mechanic's lien arising out of the Contract and related to the Work covered by the payment.

- Submit partial waivers on each item for amount requested in previous application, after 1. deduction for retainage, on each item.
- When an application shows completion of an item, submit conditional final or full 2. waivers.
- Owner reserves the right to designate which entities involved in the Work must submit 3. waivers.
- Waiver Forms: Submit executed waivers of lien on forms acceptable to Owner. 4.
- Initial Application for Payment: Administrative actions and submittals that must precede or H. coincide with submittal of first Application for Payment include the following:
 - 1. List of subcontractors.
 - 2. Schedule of values.
 - Contractor's construction schedule (preliminary if not final). 3.
 - Schedule of unit prices. 4.
 - Submittal schedule (preliminary if not final). 5.
 - 6. List of Contractor's staff assignments.
 - List of Contractor's principal consultants. 7.
 - 8. Copies of building permits.
 - Copies of authorizations and licenses from authorities, having jurisdiction for 9. performance of the Work.
 - 10. Initial progress report.
 - Report of preconstruction conference. 11.
 - 12. Certificates of insurance and insurance policies.
- Application for Payment at Substantial Completion: After Architect issues the Catificate of I. antial Completion, submit an AFF rtion of the Work claimed as substantially complete. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum. This application shall reflect Certificates of Partial Substantial Completion issued reviewely for Owner occupancy of designated portions of the Work. Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.
 - 1.
 - 2.
- J. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:

- 1. Evidence of completion of Project closeout requirements.
- 2. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
- 3. Updated final statement, accounting for final changes to the Contract Sum.
- AIA Document G706-1994, "Contractor's Affidavit of Payment of Debts and Claims." 4.
- 5. AIA Document G706A-1994, "Contractor's Affidavit of Release of Liens."
- AIA Document G707-1994, "Consent of Surety to Final Payment." 6.
 - Evidence that claims have been settled.

Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.

Final liquidated damages settlement statement.

OP INK

SECTION 013100 - PROJECT MANAGEMENT AND COORDINATION

12 N PART 1 - GENERAL

SUMMARY

Section includes administrative provisions for coordinating construction operations on Project Auding, but not limited to, the following:

- oordination drawings.
- 2. Perfuests for Information (RFIs).
- 3. Project meetings.
- Related Requirements: Β.
 - Section 0173 "Execution" for procedures for coordinating general installation and 1. field-engineering services, including establishment of benchmarks and control points.

1.2 **DEFINITIONS**

RFI: Request from Owner, Architect or Contractor seeking information required by or A. clarifications of the Contract Documents

1.3 INFORMATIONAL SUBMITTALS

- Subcontract List: Prepare a written summary identity ng individuals or firms proposed for each A. portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular forms
 - Name, address, and telephone number of entity performing subcontract or supplying 1. products.
 - Number and title of related Specification Section(s) covered by subcontract. 2.
 - Drawing number and detail references, as appropriate, covered by subcontract. 3.

1.4 GENERAL COORDINATION PROCEDURES

- Coordination: Coordinate construction operations included in different Section A. Specifications to ensure efficient and orderly instantation of each part of the construction operations, included in different Sections, that depend on each other for property Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate The way
 - 1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
 - 2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.

RSC Project No.73.19.002

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- 3. Make adequate provisions to accommodate items scheduled for later installation.
- PRINK C Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.
 - 1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

Administrative Procedures: Coordinate scheduling and timing of required administrative recedures with other construction activities to avoid conflicts and to ensure orderly progress of the *p*ork. Such administrative activities include, but are not limited to, the following:

- Reparation of Contractor's construction schedule. 1.
- 2. Preparation of the schedule of values.
- Installation and removal of temporary facilities and controls. 3.
- Delivery and processing of submittals. 4.
- Progress meetings. 5.
- Preinstallation conferences. 6.
- Project closeout activities. 7.
- 8. Startup and adjustment of systems.

COORDINATION DRAWINGS 1.5

- Coordination Drawings, General: Prepare coordination drawings according to requirements in A. individual Sections, where installation is not completely shown on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.
 - Content: Project-specific information, drawn ocurately to a scale large enough to 1. indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable
 - Indicate functional and spatial relationships of components of architectural, a. structural, civil, mechanical, and electrical systems.
 - Indicate dimensions shown on the Drawings. Specifically note dimensions that b. appear to be in conflict with submitted equipment and winimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficul installations
- B. Coordination Drawing Organization: Organize coordination drawings as follows:
- will not be considered changes to the lination Drawing Organization: Organize coordination drawings as follows: Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of trigible ceiling-mounted devices relative to acoustical ceiling grid. 1.
 - 2. accommodate layout of light fixtures indicated on Drawings.

RSC Project No.73.19.002

- Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans 3. and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
- Structural Penetrations: Indicate penetrations and openings required for all disciplines. 4.
- 5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.

Review: Architect will review coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility.

1.6

OR INA,

REOCHSTS FOR INFORMATION (RFIs)

- General: Impediately on discovery of the need for additional information or interpretation of A. the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.
 - Architect will return RFIs submitted to Architect by other entities controlled by 1. Contractor with no response.
 - 2. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.
- B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following: Or Mr.
 - 1. Project name.
 - 2. Project number.
 - Date. 3.
 - Name of Contractor. 4.
 - 5. Name of Architect
 - RFI number, numbered sequentially. 6.
 - 7. RFI subject.
 - Specification Section number and title and related paragraphs, as appropriate. 8.
 - 9. Drawing number and detail references, as appropriate.
 - Field dimensions and conditions, as appropriate. 10.
 - Contractor's suggested resolution. If Contractor's solution(s) impacts the Contract Time 11. or the Contract Sum, Contractor shall state impact in the RFI.
 - 12. Contractor's signature.
 - Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop 13.
- C.
- 13. Attachments. Drawings, coordination drawings, and other miorinal needing interpretation.
 RFI Forms: AIA Document G716, form bound in Project Manual.
 Architect's Action: Architect will review each RFI, determine action required, and respond.
 Architect's Action: Architect's response for each RFI. RFIs received by Architect after
 Architect's the following working day. D.
 - 1. The following RFIs will be returned without action:

RSC Project No.73.19.002

- Requests for approval of submittals. a.
- Requests for approval of substitutions. b.
- Requests for coordination information already indicated in the Contract c. Documents.
- d. Requests for adjustments in the Contract Time or the Contract Sum.
- Requests for interpretation of Architect's actions on submittals. e.
- f. Incomplete RFIs or inaccurately prepared RFIs.

Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.

Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 012600 "Contract Modification Procedures."

Contractor believes the RFI response warrants change in the Contract Time or he Sontract Sum, notify Architect in writing within 10 days of receipt of the RFI response.

- RFI Log: Prepare, maintein, and submit a tabular log of RFIs organized by the RFI number. E. Submit log biweekly.
- On receipt of Architect's action, update the RFI log and immediately distribute the RFI response F. to affected parties. Review response and notify Architect within 10 days if Contractor disagrees with response.
 - Identification of related Minor Change in the Work, Construction Change Directive, and 1. Proposal Request, as appropriate.
 - Identification of related Field Order, Work Change Directive, and Proposal Request, as 2. appropriate.

1.7 **PROJECT MEETINGS**

PRINK C

- General: Architect will schedule and conduct meetings and conferences at Project site unless A. otherwise indicated.
 - Attendees: Inform participants and others involved, and individuals whose presence is 1. required, of date and time of each meeting. Notify Owner and Artificet of scheduled meeting dates and times.
 - Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees. 2.
 - Minutes: Architect will record significant discussions and agreements ashieved. 3. Distribute the meeting minutes to everyone concerned, including Owner and Architect,
- Distribute the mecung within 5 days of the meeting. Preconstruction Conference: Architect will schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect, but no later than 15 there execution of the Agreement. B.
 - Contractor and its superintendent; major subcontractors; suppliers; and other concerned

RSC Project No.73.19.002

parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.

- f. g. h. Agenda: Discuss items of significance that could affect progress, including the following:
 - Tentative construction schedule.
 - Phasing.
 - Critical work sequencing and long-lead items.
 - Designation of key personnel and their duties.
 - Procedures for processing field decisions and Change Orders.
 - Procedures for RFIs.
 - Procedures for testing and inspecting.
 - Procedures for processing Applications for Payment.

Distribution of the Contract Documents.

- Submittal procedures.
- Preparation of record documents.
- Decof the premises.
- Work restrictions. m.
- Working nours. n.

1.

- Owner's occupancy requirements. 0.
- Responsibility for temporary facilities and controls. Procedures for insisture and mold control. Procedures for diaruptions and shutdowns. p.
- q.
- r.
- Construction waste management and recycling. s.
- t.
- Parking availability. Office, work, and storage areas. u.
- Equipment deliveries and phonth v.
- First aid. w.
- Security. х.
- Progress cleaning. y.
- Minutes: Entity responsible for conducting mering will record and distribute meeting 3. minutes.
- Preinstallation Conferences: Architect shall conduct a preinstallation conference at Project site C. before each construction activity that requires coordination with other construction.
 - Attendees: Installer and representatives of manufacturers and labreators involved in or 1. affected by the installation and its coordination or integration with the materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect of scheduled meeting dates.
 - Agenda: Review progress of other construction activities and preparations for the 2. CCMENT particular activity under consideration, including requirements for the following:
 - Contract Documents. a.
 - b. Options.
 - Related RFIs. c.
 - d. Related Change Orders.
 - e. Purchases.
 - f. Deliveries.
 - g. Submittals.
 - h. Review of mockups.

- Possible conflicts. i.
- j. Compatibility problems.
- Time schedules.
- Weather limitations.
- Manufacturer's written instructions.
- Warranty requirements.
- CORING S. Compatibility of materials.
 - Acceptability of substrates.
 - Temporary facilities and controls.
 - Space and access limitations.
 - Regulations of authorities having jurisdiction.

Testing and inspecting requirements.

Installation procedures.

- Coordination with other work.
- Required performance results.
- Protection of adjacent work. х.
- Protection of construction and personnel. y.
- 3. Record significant conference discussions, agreements, and disagreements, including required corrective plensures and actions.
- Reporting: Distribute prinutes of the meeting to each party present and to other parties 4. requiring information.
- Do not proceed with installation if the conference cannot be successfully concluded. 5. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.
- Progress Meetings: Architect will conductor gress meetings at biweekly intervals. D.
 - Attendees: In addition to representatives of Qwner and Architect, each contractor, 1. subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
 - Agenda: Review and correct or approve minutes of previews progress meeting. Review 2. other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - Contractor's Construction Schedule: Review progress since the last meeting. a. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties avoived to do so. Discuss whether schedule revisions are required to ensure that our ent and subsequent activities will be completed within the Contract Time.
 - 1) Review schedule for next period.
 - b. Review present and future needs of each entity present, including the following:
 - 1) Interface requirements.
 - Sequence of operations. 2)
 - 3) Status of submittals.

RSC Project No.73.19.002

- 4) Deliveries.
- 5) Off-site fabrication.
- Access. 6)
- 7) Site utilization.
- 8) Temporary facilities and controls.
- 9) Progress cleaning.
- Quality and work standards. 10)
- 11) Status of correction of deficient items.
- Field observations. 12)
- Status of RFIs. 13)
- 14) Status of proposal requests.
- 15) Pending changes.
- Status of Change Orders. 16)
- 17) Pending claims and disputes. 18)
 - Documentation of information for payment requests.
- 3. Minutes Architect will record and distribute the meeting minutes to each party present and to parties requiring information.
 - Schedule Updating: Revise Contractor's construction schedule after each progress ice, sions, acurrently, which we have a second seco a. meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 013100

OP IN OPMA

SECTION 013200 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for documenting the progress of Instruction during performance of the Work, including the following:

- ontractor's construction schedule.
- condition reports.
- 1.2 DEFINITIO
 - Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, A. and controlling the construction project. Activities included in a construction schedule consume time and resources.
 - 1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times
 - 2. Predecessor Activity: An activity that precedes another activity in the network.
 - Successor Activity: An activity that follows another activity in the network. 3.
 - Critical Path: The longest connected chain of interdependent activities through the network B. schedule that establishes the minimum overall Project duration and contains no float.
 - Float: The measure of leeway in starting and completing in activity. C.

1.3 INFORMATIONAL SUBMITTALS

- Format for Submittals: Submit required submittals in the following A.
 - 1. PDF electronic file.
- Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule B. for entire construction period.
 - Submit a working electronic copy of schedule, using software indicated, and hoped to 1. comply with requirements for submittals. Include type of schedule (initial or undated) MENT and date on label.
- C. Construction Schedule Updating Reports: Submit with Applications for Payment.
- D. Site Condition Reports: Submit at time of discovery of differing conditions.

RSC Project No.73.19.002

CONSTRUCTION PROGRESS DOCUMENTATION

1.4 COORDINATION

- iop nx Coordinate Contractor's construction schedule with the schedule of values, list of subcontracts, A. submittal schedule, progress reports, payment requests, and other required schedules and reports.
 - Secure time commitments for performing critical elements of the Work from entities 1. involved.

Coordinate each construction activity in the network with other activities and schedule them in proper sequence.

PART 2

CONTRACTOR'S CONSTRUCTION SCHEDULE, GENERAL 2.1

- Time Frame: Extent schedule from date established for the Notice to Proceed to date of final A. completion.
 - Contract completion date shall not be changed by submission of a schedule that shows an 1. early completion date uness specifically authorized by Change Order.
- Constraints: Include constraints and work restrictions indicated in the Contract Documents and B. as follows in schedule, and show how the sequence of the Work is affected.
 - Phasing: Arrange list of activities of schedule by phase. 1.
 - 2. Work Restrictions: Show the effect of the following items on the schedule:
 - Coordination with existing construction a.
 - Limitations of continued occupancies. b.
 - Uninterruptible services. c.
 - Partial occupancy before Substantial Complet d.
 - Use of premises restrictions. e.
 - f. Provisions for future construction.
 - Seasonal variations. g.
 - h. Environmental control.
 - Work Stages: Indicate important stages of construction for each major portion of the 3. Work.
- C.
- WORK. Milestones: Include milestones indicated in the Contract Local not limited to, the Notice to Proceed, Substantial Completion, and final completion Upcoming Work Summary: Prepare summary report indicating activities scheduled to occurrent accommence prior to submittal of next schedule update. Summarize the following issues: D.

 - 3. Rejected or unreturned submittals.
 - 4. Notations on returned submittals.

RSC Project No.73.19.002

CONSTRUCTION PROGRESS DOCUMENTATION

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- 5. Pending modifications affecting the Work and Contract Time.
- OR INF. Recovery Schedule: When periodic update indicates the Work is 15 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule.

Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.

- CONTRACTOR'S CONSTRUCTION SCHEDULE (GANTT CHART)
- Gant shart Schedule: Submit a comprehensive, fully developed, horizontal, Gantt-chart-type, A. Contractors construction schedule within 30 days of date established for the Notice to Proceed.
- Preparation: Indicate each significant construction activity separately. Identify first workday of B. each week with a continuous vertical line.
 - For construction activities that require three months or longer to complete, indicate an 1. estimated completion percentage in 10 percent increments within time bar.

2.3 REPORTS

Site Condition Reports: Immediately ordiscovery of a difference between site conditions and the Contract Documents, prepare and supprit a detailed report. Submit with a Request for A. Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Doruments.

PART 3 - EXECUTION

3.1 CONTRACTOR'S CONSTRUCTION SCHEDULE

- NON N Contractor's Construction Schedule Updating: At biweekly interval, applate schedule to reflect A. actual construction progress and activities. Issue schedule before each regularly scheduled progress meeting.
 - Revise schedule immediately after each meeting or other activity where revisions have 1. been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
 - 2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations
 - 3. As the Work progresses, indicate final completion percentage for each activity.
- MENT Distribution: Distribute copies of approved schedule to Architect, Owner, separate contractors, B. testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.
 - 1. Post copies in Project meeting rooms and temporary field offices.

RSC Project No.73.19.002

RSC Project No.73.19.002

CONSTRUCTION PROGRESS DOCUMENTATION

SECTION 013233 - PHOTOGRAPHIC DOCUMENTATION

12 N. PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for the following:

Preconstruction photographs. Periodic construction photographs.

- Related Kegyirements: B.
 - Section 017700 "Closeout Procedures" for submitting photographic documentation as 1. Project Recent Documents at Project closeout.

INFORMATIONAL SUBMITTALS 1.2

- Key Plan: Submit key plan of Project site and building with notation of vantage points marked A. for location and direction of each photograph. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.
- Digital Photographs: Submit unaltered, original, full-size image files within 5 days of taking Β. photographs.
 - Digital Camera: Minimum sensor resolution & 8 megapixels. 1.
 - Identification: Provide the following information with each image description in file 2. metadata tag:
 - Name of Project. a.
 - Name and contact information for photographer. b.
 - Date photograph was taken. c.
 - d. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
- C. Construction Photographs: Submit two prints of each photographic view withingten days of taking photographs.
 - 1. Format: 8-by-10-inch smooth-surface matte prints on single-weight, commercial-grade photographic paper; mounted on linen or card stock to allow a 1-inch- wide marking and enclosed back to back in clear plastic steeves una are present binder. Identification: On back of each print, provide an applied label or rubber-stamped
 - 2.
 - Name of Project. a.
 - b. Name and contact information for photographer.

- Name of Architect c.
- Name of Contractor. d.
- Date photograph was taken if not date stamped by camera. e.
- Description of vantage point, indicating location, direction (by compass point), and f. elevation or story of construction.
- Unique sequential identifier keyed to accompanying key plan. g.

QUALITY ASSURANCE

- notographer Qualifications: An individual who has been regularly engaged as a professional protographer of construction projects for not less than three years.
 - USAGERICNTS 1.4
 - Obtain and transfer copyright usage rights from photographer to Owner for unlimited A. reproduction of photographic documentation.

PART 2 - PRODUCTS

2.1 PHOTOGRAPHIC MEDIA

- Digital Images: Provide images in JPG format, with minimum size of 8 megapixels. Α.
- PART 3 EXECUTION

3.1 CONSTRUCTION PHOTOGRAPHS

- Photographer: Engage a qualified photographer to take construction photographs. A.
- General: Take photographs using the maximum range of depth of find, and that are in focus, to B. clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.
 - Maintain key plan with each set of construction photographs had identifies each 1. photographic location.

1× m

- Digital Images: Submit digital images exactly as originally recorded in the digital gamera, C. without alteration, manipulation, editing, or modifications using image-editing software
 - 1.
 - Date and Time: Include date and time in file name for each image. Field Office Images: Maintain one set of images accessible in the field office at Project site, available at all times for reference. Identify images in the same manner as those 2.
- D. Preconstruction Photographs: Before commencement of excavation, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Architect.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- Take 20 photographs to show existing conditions adjacent to property before starting the 1. Work.
- OP MA Periodic Construction Photographs: Take 20 photographs monthly, coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken.

Final Completion Construction Photographs: Take 20 color photographs after date of Substantial Completion for submission as Project Record Documents. Architect will inform photographer of desired vantage points.

- Additional Photographs: Architect may request photographs in addition to periodic photographs G. specified. Additional photographs will be paid for by Change Order and are not included in the Contrac Sum.
 - Three dave notice will be given, where feasible. 1.
 - In emergency situations, take additional photographs within 24 hours of request. 2.
 - Circumstances that could require additional photographs include, but are not limited to, 3. the following.
 - Special events planned at Project site. a.
 - Immediate follow up when on-site events result in construction damage or losses. b.
 - Photographs to be taken at fabrication locations away from Project site. These c. photographs are not subject to unit prices or unit-cost allowances.
 - Substantial Completion of a major phase or component of the Work. d.
 - Extra record photographs a function of final acceptance. e.
 - ne phote, And Charles and Company of the company of Owner's request for special publicity photographs. f.

END OF SECTION 013233

SECTION 013300 - SUBMITTAL PROCEDURES

12/N PART 1 - GENERAL

SUMMARY

Section includes requirements for the submittal schedule and administrative and procedural Quirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

- Related Requirements: B.
 - Setio 013200 "Construction Progress Documentation" for submitting schedules and 1. reports including Contractor's construction schedule.
 - 2. Section 017 23 "Operation and Maintenance Data" for submitting operation and maintenance manuals. Section 0178-9 "Project Record Documents" for submitting record Drawings, record
 - 3. Specifications, and record Product Data.
 - Section 017900 "Def opstration and Training" for submitting video recordings of 4. demonstration of equippent and training of Owner's personnel.

1.2 **DEFINITIONS**

- Action Submittals: Written and graphic information and physical samples that require A. Architect's responsive action.
- Informational Submittals: Written and graphic information and physical samples that do not B. require Architect's responsive action. Submittals may be rejected for not complying with requirements.

1.3 ACTION SUBMITTALS

Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates A. required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time equired for making tablication, corrections or revisions to submittals noted -... reviewing submittals required by those corrections. SUBMITTAL ADMINISTRATIVE REQUIREMENTS Architect's Digital Data Files: Electronic copies of digital data files of the Contract Drawings will be provided by Architect for Contractor's use in preparing submittals.

1.4

- A.
 - Drawings for use in preparing Shop Drawings and Project record drawings.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

2.

- Architect makes no representations as to the accuracy or completeness of digital a. data drawing files as they relate to the Contract Drawings.
- PRINK, Coordination: Coordinate preparation and processing of submittals with performance of construction activities.
 - Coordinate each submittal with fabrication, purchasing, testing, delivery, other 1. submittals, and related activities that require sequential activity.

Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

- Processing Time. Allow time for submittal review, including time for resubmittals, as follows. C. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will e authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
 - Initial Review: Allow 10 days for initial review of each submittal. Allow additional time 1. if coordination with sequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
 - 2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
 - Resubmittal Review: Allow 15 days for review of each resubmittal. 3.
- Electronic Submittals: Identify and incorporate information in each electronic submittal file as D. follows:
 - Assemble complete submittal package into a single indexed file incorporating submittal 1. requirements of a single Specification Section and ransmittal form with links enabling navigation to each item.
 - Name file with submittal number or other unique identifier. And using revision identifier. 2.
 - File name shall use project identifier and Specification Section number followed a. by a decimal point and then a sequential number (e.g., LNHS-061000.01). by -Resubmittals shan LNHS-061000.01.A). Provide means for insertion to permanently record Contractor's review markings and action taken by Architect. Transmittal Form for Electronic Submittals: Use electronic form acceptable to Owler, containing the following information:
 - 3.
 - 4.

 - Name of firm or entity that prepared submittal. e.
 - f. Names of subcontractor, manufacturer, and supplier.

- Category and type of submittal. g.
- Submittal purpose and description. h.
- Specification Section number and title. i.
- Specification paragraph number or drawing designation and generic name for each j. of multiple items.
- Drawing number and detail references, as appropriate. k.
- Location(s) where product is to be installed, as appropriate. 1.
- Related physical samples submitted directly. m.
- Indication of full or partial submittal. n.
- Transmittal number, numbered consecutively. о.
 - Submittal and transmittal distribution record.
 - Other necessary identification.

Remarks.

- 5. Metadaa: Include the following information as keywords in the electronic submittal file metadzta.
 - Project name. a.
 - b. Number and title of appropriate Specification Section.
 - Manufacturer name. c.
 - d. Product name.
- Options: Identify options requiring selection by Architect. E.
- Deviations: Identify deviations from the ontract Documents on submittals. F.
- Resubmittals: Make resubmittals in same form and number of copies as initial submittal. G.
 - 1. Note date and content of previous submittal,
 - Resubmit submittals until they are marked with approval notation from Architect's action 2. stamp.
- Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, H. fabricators, installers, authorities having jurisdiction, and others as a censor of performance of construction activities. Show distribution on transmittal forms.
- Use for Construction: Retain complete copies of submittals on Project Site. Use only final action I. submittals that are marked with approval notation from Architect's action strong

PART 2 - PRODUCTS

POR INICOS

2.1 SUBMITTAL PROCEDURES

- General Submittal Procedure Requirements: A.
 - 1. Submit electronic submittals via email as PDF electronic files.
- OOCUMIENT Architect will return annotated file. Annotate and retain one copy of file as an a. electronic Project record document file.

- 2. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
 - Provide a digital signature with digital certificate on electronically-submitted a. certificates and certifications where indicated.

PRINK C Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

If information must be specially prepared for submittal because standard published data fe not suitable for use, submit as Shop Drawings, not as Product Data.

- 2. kark each copy of each submittal to show which products and options are applicable.
- 3. Include the following information, as applicable:
 - Manufacturer's catalog cuts. a.
 - Manufacturer's product specifications. b.
 - c.
 - Standard color charts. Statement of compliance with specified referenced standards. d.
 - e.
 - Testing by recognized testing agency. Application of testing agency labels and seals. f.
 - Notation of coordination requirements. g.
 - Availability and delivery time information. h.
- For equipment, include the following in addition to the above, as applicable: 4.
 - Wiring diagrams showing factory installed wiring. a.
 - Printed performance curves. b.
 - Operational range diagrams. c.
 - d. Clearances required to other construction in not indicated on accompanying Shop Drawings.
- 5. Submit Product Data before or concurrent with Samples
- Submit Product Data in the following format: 6.
 - PDF electronic file. a.
- Shop Drawings: Prepare Project-specific information, drawn accurately to cale. Do not base C. Shop Drawings on reproductions of the Contract Documents or standard printed data
 - He . CUMENT Preparation: Fully illustrate requirements in the Contract Documents. Include the 1. following information, as applicable:
 - Identification of products. a.
 - b. Schedules.
 - Compliance with specified standards. c.
 - d. Notation of coordination requirements.
 - Notation of dimensions established by field measurement. e.
 - f. Relationship and attachment to adjoining construction clearly indicated.
 - Seal and signature of professional engineer if specified. g.

- 2. Submit Shop Drawings in the following format:
 - PDF electronic file. a.

PRINK C Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.

Transmit Samples that contain multiple, related components such as accessories together in one submittal package.

Identification: Attach label on unexposed side of Samples that includes the following:

Generic description of Sample.

Product name and name of manufacturer.

Sample source.

1.

- Number and title of applicable Specification Section. d.
- For projects where electronic submittals are required, provide corresponding electronic submittal of sample transmittal, digital image file illustrating Sample characteristics, and 3. identification information for record.
- Disposition: Maintain sets of approved Samples at Project site, available for quality-4. control comparisons my ughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
 - Samples that may be in apported into the Work are indicated in individual a. Specification Sections. Such Samples must be in an undamaged condition at time of use.
 - Samples not incorporated into the Work, or otherwise designated as Owner's b. property, are the property of Contractor,
- Samples for Initial Selection: Submit manufacturer's color charts consisting of units or 5. sections of units showing the full range of colors, textures, and patterns available.
 - Number of Samples: Submit two full set(s) of available choices where color, a. pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
- Samples for Verification: Submit full-size units or Samples of size indicated, prepared 6. from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not huide to, the following: partial sections of manufactured or fabricated components; small outs or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
 - MENT Number of Samples: Submit 3 sets of Samples. Architect will retain 1 Sample sets; a. remainder will be returned.

- Product Schedule: As required in individual Specification Sections, prepare a written summary E. indicating types of products required for the Work and their intended location. Include the OR INK following information in tabular form:
 - 1. Submit product schedule in the following format:
 - PDF electronic file. a.

Coordination Drawings Submittals: Comply with requirements specified in Section 013100 "Project Management and Coordination."

- Construction Schedule: Comply with requirements specified in Section 013200 G. "Construction Progress Documentation."
- Application for Payment and Schedule of Values: Comply with requirements specified in H. Section 012900 "Payment Procedures.
- Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with I. requirements specified in Section 014000 "Quality Requirements."
- Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified J. in Section 017700 "Closeout Procedures."
- Maintenance Data: Comply with requirements specified in Section 017823 "Operation and K. Maintenance Data."
- Qualification Data: Prepare written information that demonstrates capabilities and experience of L. firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.
- Welding Certificates: Prepare written certification that welding procedures and personnel M. comply with requirements in the Contract Documents. Sabait record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.
- Installer Certificates: Submit written statements on manufacturers reterhead certifying that N. Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
- Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying О. that manufacturer complies with requirements in the Contract Documents. Include vidence of
- P.
- that manufacturer complexity manufacturer complexity in the contract of the complexity of the complexity of the contract description Q.

- Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's R. standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
- Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
 - Research Reports: Submit written evidence, from a model code organization acceptable to Morities having jurisdiction, that product complies with building code in effect for Project.
 - Schedge of Tests and Inspections: Comply with requirements specified in Section 014000 U. "Quality Requirements."
 - Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing V. agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
 - Compatibility Test Record: Submit reports written by a qualified testing agency, on testing W. agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
 - X. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
 - Design Data: Prepare and submit written and graphic information, including, but not limited to, Υ. performance and design criteria, list of applicably ades and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 **DELEGATED-DESIGN SERVICES**

- Performance and Design Criteria: Where professional design services of certifications by a A. design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - If criteria indicated are not sufficient to perform services or certification required, 1. submit a written request for additional information to Architect.
- a written required Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file paper copies of certificate, signed and sealed by the responsible design professional, for each product and system B.

Indicate that products and systems comply with performance and design criteria in the 1. Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

CONTRACTOR'S REVIEW

- ion and Informational Submittals: Review each submittal and check for coordination with one-Work of the Contract and for compliance with the Contract Documents. Note corrections and just dimensions. Mark with approval stamp before submitting to Architect.
- Project Close ut and Maintenance Material Submittals: See requirements in Section 017700 B. "Closeout Procedures."
- Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name C. and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT'S ACTION

- General: Architect will not review submittals that do not bear Contractor's approval stamp and A. will return them without action.
- Action Submittals: Architect will review each submittal, make marks to indicate corrections or B. revisions required, and return it. Architect will stand uch submittal with an action stamp and will mark stamp appropriately to indicate action.
 - Sample Stamp: 1.

		_
SUBMITTAL NO.: SUBMISSION:	DATE RECEIVED.	
APPROVED APPROVED AS NOTED	REJECTED	
PROJECT AND THE INFORMATION GIVEN IS RESPONSIBLE FOR DIMENSIONS TO E SITE; INFORMATION THAT PERTAINS SOLI MEANS AND METHODS OF CONSTRUCT TRADES, AND PERFORMING ALL WORK	ORMANCE WITH THE DESIGN CONCEPTOR THE IN THE CONTRACT DOCUMENTS. CONTRACTOR BE CONFIRMED AND CORRELATED AT THE OB ELY TO THE FABRICATION PROCESS OR TO THE TION; COORDINATION OF THE WORK OF ALL IN A SAFE AND SATISFACTORY MANNER. - Action Definitions: a.
 - Approved Document is approved and General Contractor can proceed 1) with work.
 - 2) Approved as Noted – Document is approved and General Contractor can proceed with work based on the architect's comments.
 - Rejected Document is rejected and General Contractor cannot proceed 3) with work.
 - 4) Revise and Resubmit - General Contractor to Revise per architect's comments and resubmit the revised document to the architect. Do not proceed with work until approved.
- Informational Submittals: Architect will review each submittal and will not return it, or will C. return of it does not comply with requirements. Architect will forward each submittal to appropriate party.
- Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned D. for resubmittal without review.
- E. Submittals not required by the Contract Documents may not be reviewed and may be discarded.

END OF SECTION 013300

PRINK C

SECTION 014000 - QUALITY REQUIREMENTS

12/N PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for quality assurance and quality ontrol.

- Testing and inspecting services are required to verify compliance with requirements specified or B. indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
 - Specified tests, inspections, and related actions do not limit Contractor's other quality-1. assurance and -control procedures that facilitate compliance with the Contract Document requirements
 - Requirements for Contractor to provide quality-assurance and -control services required 2. by Architect, Owner, br authorities having jurisdiction are not limited by provisions of this Section.
 - Specific test and inspection equirements are not specified in this Section. 3.

1.2 **DEFINITIONS**

- Quality-Assurance Services: Activities, actions, and procedures performed before and during A. execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.
- Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and B. completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect.
- Mockups: Full-size physical assemblies that are constructed on-site. Nockaps are constructed to C. verify selections made under Sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance who specified
- installation tolerances. The mockups establish the standard by which the work with preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria. D.
- E. establish product performance and compliance with specified requirements.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- Source Quality-Control Testing: Tests and inspections that are performed at the source, e.g., F. plant, mill, factory, or shop.
- **OPN**^H Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

- Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an molovee. Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
 - 1. of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade(s).
- Experienced: When used with an entity or individual, "experienced" means having successfully J. completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.3 DELEGATED-DESIGN SERVICES

- Performance and Design Criteria: Where professional design services or certifications by a A. design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.
 - If criteria indicated are not sufficient to perform services or certification required, submit 1. a written request for additional information to Architect.
- Delegated-Design Services Statement: Submit a statement signed and sealed by the responsible B. design professional, for each product and system specificate assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.4 CONFLICTING REQUIREMENTS

- Referenced Standards: If compliance with two or more standards is specified and the standards A. establish different or conflicting requirements for minimum quantities or quality levels, comply
- establish universal with the most stringent requirement. Kerer command apparently equal, to Architect for a decision before proceeding. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be minimum provided or performed. The actual installation may comply exactly with the max exceed the minimum within reasonable limits. B. appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.5 INFORMATIONAL SUBMITTALS

- OP INS, Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility sent to authorities having jurisdiction before starting work on the following systems:
 - Seismic-force-resisting system, designated seismic system, or component listed in the 1. designated seismic system quality-assurance plan prepared by Architect.

Main wind-force-resisting system or a wind-resisting component listed in the wind-forceresisting system quality-assurance plan prepared by Architect.

Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to B. demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent control on the inspection of the testing agency by a recognized authority.

REPORTS AND DOCUMENTS 1.6

2.

- Test and Inspection Reports: Prepare and submit certified written reports specified in other A. Sections. Include the following:
 - 1. Date of issue.
 - 2. Project title and number.
 - Name, address, and telephone number of testing agency. 3.
 - 4. Dates and locations of samples and tests or inspections.
 - Names of individuals making tests and inspections. 5.
 - Description of the Work and test and in pection method. 6.
 - Identification of product and Specification Section. 7.
 - Complete test or inspection data. 8.
 - Test and inspection results and an interpretation of test results. 9.
 - Record of temperature and weather conditions at time of sample taking and testing and 10. inspecting.
 - or inspected Work complies with 11. Comments or professional opinion on whether test the Contract Document requirements.
 - 12. Name and signature of laboratory inspector.
 - Recommendations on retesting and reinspecting. 13.
- Manufacturer's Field Reports: Prepare written information documenting Β. ests and inspections specified in other Sections. Include the following:
 - Name, address, and telephone number of representative making report. 1.
 - 2.
 - Name, address, und Statement on condition of substrates and und Summary of installation procedures being followed, when the requirements and, if not, what corrective action was taken. Results of operational and other tests and a statement of whether observed performance membres with requirements. 3.
 - 4.
 - 5.
- C. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee

payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

OUALITY ASSURANCE

General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar whose indicated for this Project and with a record of successful in-service performance, as weilds sufficient production capacity to produce required units.

- Fabricator Qualifications: A firm experienced in producing products similar to those indicated C. for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling D. work similar in makerial design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.
- Professional Engineer Qualifications: A professional engineer who is legally qualified to E. practice in jurisdiction where Froject is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar in material, design, and extent to those indicated for this Project.
- Specialists: Certain Specification Sections require that specific construction activities shall be F. performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
 - Requirements of authorities having jurisdiction shall supersede requirements for 1. specialists.
- Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the G. experience and capability to conduct testing and inspecting indicated as locumented according to ASTM E 329; and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.
 - 1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1919.
 - NVLAP: A testing agency accredited according to NIST's National Voluntary choratory 2.
- Accreditation Program. Manufacturer's Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Derived H.
- I. for compliance with specified requirements for performance and test methods, comply with the following:

- 1. Contractor responsibilities include the following:
 - Provide test specimens representative of proposed products and construction. a.
 - b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
 - When testing is complete, remove test specimens, assemblies, and mockups; do c. not reuse products on Project.

Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

- Mockets Before installing portions of the Work requiring mockups, build mockups for each J. form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
 - Build mockups in location and of size indicated or, if not indicated, as directed by 1. Architect.
 - 2. Notify Architect 5 days in advance of dates and times when mockups will be constructed.
 - Demonstrate the proposed range of aesthetic effects and workmanship. 3.
 - Obtain Architect's approval of mockups before starting work, fabrication, or construction. 4.
 - Allow 5 days for initial review and each re-review of each mockup. a.
 - Maintain mockups during construction in an undisturbed condition as a standard for 5. judging the completed Work.
 - Demolish and remove mockups when directed unless otherwise indicated. 6.

1.8 QUALITY CONTROL

PRINK C

- Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, A. Owner will engage a qualified testing agency to perform these services.
 - 1. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.
- ctor Responsibilities: Tests and more interaction interactions responsibility. Perform additional quality-control means ork complies with requirements, whether specified or not. Where services are indicated as Contractor's responsibility, engage a qualified resting agency to perform these quality-control services. Contractor Responsibilities: Tests and inspections not explicitly assigned to where are В. Contractor's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.
 - 1.
 - Notify testing agencies at least 24 hours in advance of time when Work that requires 2. testing or inspecting will be performed.

^COP INX

- Where quality-control services are indicated as Contractor's responsibility, submit a 3. certified written report, in duplicate, of each quality-control service.
- 4. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
- Submit additional copies of each written report directly to authorities having jurisdiction, 5. when they so direct.

Manufacturer's Field Services: Where indicated, engage a manufacturer's representative to observe and inspect the Work. Manufacturer's representative's services include examination of substrates and conditions, verification of materials, inspection of completed portions of the Vork, and submittal of written reports.

- Return g/Reinspecting: Regardless of whether original tests or inspections were Contractor's D. responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.
- Testing Agency Besponsibilities: Cooperate with Architect, and Contractor in performance of E. duties. Provide qualified personnel to perform required tests and inspections.
 - Notify Architect and Contractor promptly of irregularities or deficiencies observed in the 1. Work during performance of its services.
 - Determine the location from which test samples will be taken and in which in-situ tests 2. are conducted.
 - Conduct and interpret tests and inspections and state in each report whether tested and 3. inspected work complies with or deviates from requirements.
 - Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor 4.
 - Do not release, revoke, alter, or increase the Contract Document requirements or approve 5. or accept any portion of the Work.
 - 6. Do not perform any duties of Contractor.
- Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify F. agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
 - 1. Access to the Work.
 - 2. Incidental labor and facilities necessary to facilitate tests and inspections,
 - Adequate quantities of representative samples of materials that require testing and 3. inspecting. Assist agency in obtaining samples.
 - 4. Facilities for storage and field curing of test samples.
 - 5.
 - 6.
 - 7.
- Facilities for surge Delivery of samples to testing agencies. Preliminary design mix proposed for use for material mixes that require agency. Security and protection for samples and for testing and inspecting equipment at Project G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.

1. Schedule times for tests, inspections, obtaining samples, and similar activities.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

TEST AND INSPECTION LOG

- and Inspection Log: Prepare a record of tests and inspections. Include the following:
 - Date test or inspection was conducted. 1.
 - 2. Description of the Work tested or inspected.
 - Date test or inspection results were transmitted to Architect. 3.
 - Identification of testing agency or special inspector conducting test or inspection. 4.
- Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and B. inspection log for Architects reference during normal working hours.

REPAIR AND PROTECTION 3.2

- General: On completion of testing, impecting, sample taking, and similar services, repair A. damaged construction and restore substrates and finishes.
 - 1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas re₁ re as 1 ng and pa. and extend restoration into adjoining areas it durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Section 017300 "Execution."
- B. Protect construction exposed by or for quality-control service activities.
- Repair and protection are Contractor's responsibility, regardless C. responsibility for quality-control services.

END OF SECTION 014000

SECTION 014200 - REFERENCES

12/N PART 1 - GENERAL

DEFINITIONS

General: Basic Contract definitions are included in the Conditions of the Contract.

- proved": When used to convey Architect's action on Contractor's submittals, applications, B. and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.
- "Directed". A command or instruction by Architect. Other terms including "requested," C. "authorized," 'selected," "required," and "permitted" have the same meaning as "directed."
- "Indicated": Requirements expressed by graphic representations or in written form on D. Drawings, in Specification, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."
- E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.
- "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, F. installation, and similar operations.
- "Install": Unload, temporarily store, unpack, assemble, erect, place, anchor, apply, work to G. dimension, finish, cure, protect, clean, and similar operations at Project site.
- H. "Provide": Furnish and install, complete and ready for the interded use.
- "Project Site": Space available for performing construction activities. The extent of Project site I. is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.2 **INDUSTRY STANDARDS**

- Applicability of Standards: Unless the Contract Documents include more stringent A. requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.
- The second secon Publication Dates: Comply with standards in effect as of date of the Contract Documents unless B. otherwise indicated.
- C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

Where copies of standards are needed to perform a required construction activity, obtain 1. copies directly from publication source.

ABBREVIATIONS AND ACRONYMS

Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Gale's "Encyclopedia of Associations: National Organizations of the U.S." or in Columbia Books' 'National Trade & Professional Associations of the United States."

- st of abbreviations in construction drawing set. B.

SECTION 016000 - PRODUCT REQUIREMENTS

12 IN. PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for selection of products for use in Net interview of the standard market in the standard market is the standard market in the standard market is a standard market in the standard market in the standard market is a standard market in the standard market in the standard market is a standard market in the standard market in the standard market in the standard market is a standard market in the standard market in the standard market in the standard market is a standard market in the sta products; special warranties; and comparable products.

- Related Requirements: B.
 - Section 012500 "Substitution Procedures" for requests for substitutions. 1.

DEFINITIONS 1.2

- Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," A. "equipment," "system," and terms of similar intent.
 - 1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature, that is current as of date of the Contract Documents.
 - New Products: Items that have not previously been incorporated into another project or 2. facility. Products salvaged or recycled from other projects are not considered new products.
 - Comparable Product: Product that is demonstrated and approved through submittal 3. process to have the indicated qualities related to trong function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.
- Basis-of-Design Product Specification: A specification in which a specific manufacturer's В. product is named and accompanied by the words "basis-of-design product," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of additional manufacturers.

1.3

- ACTION SUBMITTALS Comparable Product Requests: Submit request for consideration of each comparable product. Identify product or fabrication or installation method to be replaced. Include Specification Creation number and title and Drawing numbers and titles. A.
 - documentation for evaluation within one week of receipt of a comparable product request. Architect will notify Contractor of approval or rejection of proposed comparable

product request within 15 days of receipt of request, or 5 days of receipt of additional information or documentation, whichever is later.

- Form of Approval: As specified in Section 013300 "Submittal Procedures." a.
- Use product specified if Architect does not issue a decision on use of a comparable b. product request within time allocated.

Basis-of-Design Product Specification Submittal: Comply with requirements in Section 013300 "Submittal Procedures." Show compliance with requirements.

1.4

OP MA

ALITY ASSURANCE

A. Compare on the contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

PRODUCT DELIVERY_STORAGE, AND HANDLING 1.5

- Deliver, store, and hand products using means and methods that will prevent damage, A. deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.
- B. Delivery and Handling:
 - Schedule delivery to minimize ong term storage at Project site and to prevent 1. overcrowding of construction spaces.
 - overcrowding of construction spaces. Coordinate delivery with installation time to ensure minimum holding time for items that 2. are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
 - Deliver products to Project site in an undamaged condition in manufacturer's original 3. sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
 - handling, storing, unpacking, protecting, and installing. Inspect products on delivery to determine compliance with the Contract Documents and 4. to determine that products are undamaged and properly protected.
- C. Storage:
 - 1. Store products to allow for inspection and measurement of quantity or counting of units.
 - Store materials in a manner that will not endanger Project structure. 2.
 - Store products that are subject to damage by the elements, under cover in a weathertight 3.
 - 4.
 - Store products enclosure above ground, with ventilation adorption. Protect foam plastic from exposure to sunlight, except to extent necessary to a installation and concealment. Comply with product manufacturer's written instructions for temperature, humidity, with product manufacturer's written instructions for temperature, humidity, with and weather-protection requirements for storage. 5.
 - 6.

PRODUCT WARRANTIES 1.6

- OP INK Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.
 - 1. Manufacturer's Warranty: Written warranty furnished by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.
 - Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner.
 - Warranties: Prepare a written document that contains appropriate terms and B. identification, ready for execution.
 - Manufecturer's Standard Form: Modified to include Project-specific information and 1. properly executed.
 - Specified Form. When specified forms are included with the Specifications, prepare a 2. written document using indicated form properly executed.
 - Refer to other Sections for specific content requirements and particular requirements for 3. submitting special varianties.
 - Submittal Time: Comply with requirements in Section 017700 "Closeout Procedures." C. · 10,

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

- General Product Requirements: Provide products that comply with the Contract Documents, are A. undamaged and, unless otherwise indicated, are new at time of installation.
 - Provide products complete with accessories, trim, finish fasteners, and other items 1. needed for a complete installation and indicated use and effect.
 - Standard Products: If available, and unless custom products of monstandard options are 2. specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
 - Owner reserves the right to limit selection to products with warranties not in conflict with 3. requirements of the Contract Documents.
 - Where products are accompanied by the term "as selected," Architect will make 4. selection.
 - Descriptive, performance, and reference standard requirements in the Specifications 5. establish salient characteristics of products.
- **Product Selection Procedures:** B.
- Anna Martin Art Basis-of-Design Product: Where Specifications name a product, or refer to a product 1. indicated on Drawings, and include a list of manufacturers, provide the specified or indicated product or product approved equal by the Architect. Drawings and Specifications indicate sizes, profiles, dimensions, and other characteristics that are based

on the product named. Comply with requirements in Part 2(2.2) Comparable Products of this section for consideration of an unnamed product by a named manufacturer.

OP INO Visual Matching Specification: Where Specifications require "match Architect's sample", provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.

Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's roduct line that includes both standard and premium items.

2.2

COMPACTABLE PRODUCTS

- Conditions for Consideration: Architect will consider Contractor's request for comparable A. product when the blowing conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with these requirements:
 - Evidence that the proposed product does not require revisions to the Contract Documents, 1. that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work.
 - 2. Detailed comparison of significant qualities of proposed product with those named in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, visual effect, and specific features and requirements indicated.
 - Evidence that proposed product provides specified warranty. 3.
 - in jects of requ. List of similar installations for completed projects with project names and addresses and 4. names and addresses of architects and owners of requested.
 - 5. Samples, if requested.

PART 3 - EXECUTION (Not Used)

END OF SECTION 016000

SECTION 323113 - CHAIN LINK FENCES AND GATES

PART 1 - GENERAL 4 1 **RELATED DOCUMENTS** Drawings and general provisions of the Contract, including General and Supplementary additions and Division 01 Specification Sections, apply to this Section. 1.2 SUMMA Section Inclu A. 1. Chain-link 2. Swing Gates 1.3 PREINSTALLATION MEEPINGS

- A. Preinstallation Conference: Conduct conference at Project site.
 - Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work 1. specified elsewhere.
 - Review sequence of operation for each type of gate operator. 2.
 - 3. Review coordination of interlocked equipment specified in this Section and elsewhere.
 - Review required testing, inspecting, and centring procedures. 4.

1.4 ACTION SUBMITTALS

- Α. Product Data: For each type of product.
 - Include construction details, material descriptions, dimensions of individual components 1. and profiles, and finishes for the following:
 - Fence and gate posts, rails, and fittings. a.
 - Chain-link fabric, reinforcements, and attachments. b.
 - Accessories: Privacy slats. c.
 - d. Gates and hardware.
 - Gate operators, including operating instructions and motor characteristics. e.
- B. Shop Drawings: For each type of fence and gate assembly.
 - 1. Include plans, elevations, sections, details, and attachments to other work.
 - Include accessories, hardware, gate operation, and operational clearances. 2.
- div. N 's. M M N Y Gate Operator: Show locations and details for installing operator components, switches, 3. and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.

4. Wiring Diagrams: For power, signal, and control wiring.

INFORMATIONAL SUBMITTALS 1.5

А.

- Qualification Data: For factory-authorized service representative.
 - Product Certificates: For each type of chain-link fence, operator, and gate.

Product Test Reports: For framework strength according to ASTM F 1043, for tests performed manufacturer and witnessed by a qualified testing agency or a qualified testing agency.

Warranty: For special warranty for Owner. D.

CLOSEOUT SUBMITTALS 1.6

A. Operation and Maintenance Data: For gate operators to include in emergency, operation, and maintenance manuals.

OUALITY ASSURANCE 1.7

- Testing Agency Qualifications: For testing fence grounding; member company of NETA or an A. NRTL.
 - Testing Agency's Field Supervisor: Certified by NETA to supervise on-site testing. 1.
- B. Emergency Access Requirements: Allow Branchburg Township Fire Department continuous all-hours emergency access.

1.8 FIELD CONDITIONS

Field Measurements: Verify layout information for chain-link fences and gates shown on A. Drawings in relation to property survey and existing structures. Yerify dimensions by field measurements.

1.9 WARRANTY

- Special Warranty: Manufacturer agrees or Installer agrees to repair or replace components of A. chain-link fences and gates that fail in materials or workmanship within specified period.
 - Failures include, but are not limited to, the following: 1.
 - Failure to comply with performance requirements. a.
- UNENT Deterioration of metals, metal finishes, and other materials beyond normal b. weathering.
 - c. Faulty operation of gate operators and controls.

2. Warranty Period: Per Manufacturer or Installer's requirements or Owner's request.

PART 2 - PRODUCTS

CHAIN-LINK FENCE FABRIC

General: Provide fabric in one-piece heights measured between top and bottom of outer edge of selvage knuckle or twist according to "CLFMI Product Manual" and requirements indicated low:

- abric Height: As indicated on Drawings.
- Wire for Fabric: Wire diameter of 0.192 inch.
 - Tesh Size: 2 inches. a
 - Zinc-Coated Fabric: ASTM A 392, Type II, Class 1, 1.2 oz./sq. ft. with zinc coarry applied after weaving.
- Selvage: Knuck ed at both selvages. 3.

FENCE FRAMEWORK 2.2

b.

- Posts and Rails CS6002: ASTMF 10.3 for framework, including rails, braces, and line; terminal; and corner posts. Provide memoers with minimum dimensions and wall thickness A. according to ASTM F 1043 or ASTM F 1(83) ased on the following:
 - Fence Height: As indicated on Drawings. 1.
 - 2. Heavy-Industrial-Strength Material: Group IA, round steel pipe, Schedule 40.
 - Line Post: 4.0 inches in diameter. a.
 - b. End, Corner, and Pull Posts: 4.0 inches in diame
 - tom rails according to 3. Horizontal Framework Members: Intermediate top and ASTM F 1043. AL O
 - Top Rail: 1.66 inches in diameter. a.
 - Brace Rails: ASTM F 1043. 4.
 - 5. Metallic Coating for Steel Framework:
 - Type A: Not less than minimum 2.0-oz./sq. ft. average zinc coating according a. or 4.0-oz./sa. ft. zinc coating ASTM A 123/A 123M according ASTM A 653/A 653M.
 - Type B: Zinc with organic overcoat, consisting of a minimum of 0.9 oz./sq. ft. of b. zinc after welding, a chromate conversion coating, and a clear, verifiable polymer film.
 - External, Type B: Zinc with organic overcoat, consisting of a minimum of 0.9 c. oz./sq. ft. of zinc after welding, a chromate conversion coating, and a clear,

×,

verifiable polymer film. Internal, Type D, consisting of 81 percent, not less than 0.3-mil-thick, zinc-pigmented coating.

- Type C: Zn-5-Al-MM alloy, consisting of not less than 1.8-oz./sq. ft. coating. d.
- Coatings: Any coating above. e.

TENSION WIRE

Metallic-Coated Steel Wire: 0.177-inch-diameter, marcelled tension wire according to ASTM A 817 or ASTM A 824, with the following metallic coating:

Type II: Zinc coated (galvanized) by hot-dip process, with the following minimum coating weight:

Matching chain-link fabric coating weight.

- 2.4 SWING GAT
 - General: ASTM 1 0 for gate posts, single and double swing gate types. A.
 - 1. Gate Leaf Width. A indicated.
 - Framework Member Sizes and Strength: Based on gate fabric height of 72 inches or less. 2.
 - B. Pipe and Tubing:
 - Zinc-Coated Steel: ASTM P1042 and ASTM F 1083; protective coating and finish to 1. match fence framework.
 - 2. Gate Posts: Round tubular steel.
 - Gate Frames and Bracing: Round tubular steel. 3.
 - C. Frame Corner Construction: Welded or assembled with corner fittings.
 - D. Hardware:
 - 1. Hinges: 360-degree inward and outward swing.
 - Provi Latch: Permitting operation from both sides of gate vita provision for padlocking 2. accessible from both sides of gate.
 - Lock: Manufacturer's standard internal device. 3.
 - Closer: Manufacturer's standard. 4.

2.5 FITTINGS

- Provide fittings according to ASTM F 626. A.
- B. Post Caps: Provide for each post.
 - 1. Provide line post caps with loop to receive tension wire or top rail.
- C. Rail and Brace Ends: For each gate, corner, pull, and end post.
- D. Rail Fittings: Provide the following:

- 1. Top Rail Sleeves: Pressed-steel or round-steel tubing not less than 6 inches long.
- 2. Rail Clamps: Line and corner boulevard clamps for connecting intermediate and bottom rails to posts.
- E. Tension and Brace Bands: Pressed steel.

Tension Bars: Steel

Truss Rod Assemblies: Steel, hot-dip galvanized after threading rod and turnbuckle or other means of adjustment.

- H. Trewires, Clips, and Fasteners: According to ASTM F 626.
 - 1. Standard Round Wire Ties: For attaching chain-link fabric to posts, rails, and frames, according to the following:
 - a. Hot-Dip Galvanized Steel: 0.148-inch- diameter wire; galvanized coating thickness matching coating thickness of chain-link fence fabric.
- I. Finish:
 - 1. Metallic Coating for Isessed Steel or Cast Iron: Not less than 1.2 oz./sq. ft. of zinc.

2.6 GROUT AND ANCHORING CEMENT

- A. Nonshrink, Nonmetallic Grout: Factory-pickaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout, recommended in writing by manufacturer, for exterior applications.
- B. Anchoring Cement: Factory-packaged, nonshrink, honstrining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating, and that is recommended in writing by manufacturer for exterior applications.

2.7 GROUNDING MATERIALS

- A. Comply with requirements in Section 260526 "Grounding and Bonding for Electrical Systems."
- B. Connectors and Grounding Rods: Listed and labeled for complying with UL 467.
 - 1. Connectors for Below-Grade Use: Exothermic welded type.
 - 2. Grounding Rods: Copper-clad steel, 5/8 by 96 inches.

CUMENT

PART 3 - EXECUTION

1.

OP INX **EXAMINATION**

Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, and other conditions affecting performance of the Work.

- Do not begin installation before final grading is completed unless otherwise permitted by Architect.
- ed with installation only after unsatisfactory conditions have been corrected. Β.

PREPARATION 3.2

Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet or A. line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

CHAIN-LINK FENCE INSTAULATION 3.3

- Install chain-link fencing according to ASTM F 567 and more stringent requirements specified. Α.
 - Install fencing on established boundary lines inside property line. 1.
- Post Excavation: Drill or hand-excavate holes to posts to diameters and spacings indicated, in B. firm, undisturbed soil.
- Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil. С.
 - Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in 1. position during setting with concrete or mechanical devices.
 - Concrete Fill: Place concrete around posts to dimensions indicated and vibrate or tamp 2. for consolidation. Protect aboveground portion of posts from concrete splatter.
 - Exposed Concrete: Extend 2 inches above grade; shape and smooth to shed water. a.
- Terminal Posts: Install terminal end, corner, and gate posts according to ASTM F 567 and D. terminal pull posts at changes in horizontal or vertical alignment of 30 degrees or more. For runs exceeding 500 feet, space pull posts an equal distance between corner or end posts.
- E. Line Posts: Space line posts uniformly at 10 feet o.c.
- Post Bracing and Intermediate Rails: Install according to ASTM F 567, maintaining plum The Ny F. position and alignment of fence posts. Diagonally brace terminal posts to adjacent line posts with truss rods and turnbuckles. Install braces at end and gate posts and at both sides of corner and pull posts.

- Locate horizontal braces at midheight of fabric 72 inches or higher, on fences with top 1. rail, and at two-third fabric height on fences without top rail. Install so posts are plumb when diagonal rod is under proper tension.
- OR INS, Tension Wire: Install according to ASTM F 567, maintaining plumb position and alignment of fence posts. Pull wire taut, without sags. Fasten fabric to tension wire with 0.120-inch-diameter hog rings of same material and finish as fabric wire, spaced a maximum of 24 inches o.c. Install tension wire in locations indicated before stretching fabric. Provide horizontal tension wire at the following locations:
 - Extended along bottom of fence fabric. Install top tension wire through post cap loops. Install bottom tension wire within 6 inches of bottom of fabric and tie to each post with t less than same diameter and type of wire.
 - Top Rail Install according to ASTM F 567, maintaining plumb position and alignment of fence H. posts. Run ral continuously through line post caps, bending to radius for curved runs and terminating into rul end attached to posts or post caps fabricated to receive rail at terminal posts. Provide expansion couplings as recommended in writing by fencing manufacturer.
 - Intermediate and Bottom Rails: Secure to posts with fittings. I.
 - Chain-Link Fabric: Apply labric to outside of enclosing framework. Leave 2-inch bottom J. clearance between finish grad or surface and bottom selvage unless otherwise indicated. Pull fabric taut and tie to posts, rails, and tension wires. Anchor to framework so fabric remains under tension after pulling force is released,
 - Tension or Stretcher Bars: Thread through fabris and secure to end, corner, pull, and gate posts, Κ. with tension bands spaced not more than 15 inches o.c.
 - Fasteners: Install nuts for tension bands and carriage polts on the side of fence opposite the fabric side. Peen ends of bolts or score threads to prevent removal of nuts. L.
 - Privacy Slats: Install slats in direction indicated, securely lock M. ed in place. 1. Diagonally for privacy factor of 80 to 85.

3.4 GATE INSTALLATION

Install gates according to manufacturer's written instructions, level, plumb, nd secure for full A. opening without interference. Attach fabric as for fencing. Attach hardware using tamperresistant or concealed means. Install ground-set items in concrete for anchorage Adjust hardware for smooth operation.

3.5 ADJUSTING

CUMENT A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- B. Automatic Gate Operator: Energize circuits to electrical equipment and devices, start units, and verify proper motor rotation and unit operation.
 - 1. Hydraulic Operator: Purge operating system, adjust pressure and fluid levels, and check for leaks.
 - 2. Test and adjust operators, controls, alarms, and safety devices. Replace damaged and malfunctioning controls and equipment.
 - 3. Lubricate operator and related components.

Lubricate hardware and other moving parts.

- 3.6
- MENSTRATION
- Engage I favory-authorized service representative to train Owner's maintenance personnel to Α. adjust, operate, and maintain chain-link fences and gates. nt Mit Mor Morkician Document

END OF SECTION 323113

SECTION 017300 - EXECUTION

12 IN PART 1 - GENERAL

SUMMARY

Section includes general administrative and procedural requirements governing execution of the wrk including, but not limited to, the following:

- *Construction layout.*
- Field engineering and surveying. 2.
- 3. In tallation of the Work.
- Cutting and patching. 4.
- Coordination of Owner-installed products. 5.
- Progress cleaning. 6.
- Starting and adjusting. 7.
- Protection of installed construction. 8.
- **Related Requirements:** B.
 - Section 011000 "Summary for limits on use of Project site. 1.
 - Section 017700 "Closeout Procedures" for submitting final property survey with Project 2. Record Documents, recording of Amer-accepted deviations from indicated lines and levels, and final cleaning.

1.2 INFORMATIONAL SUBMITTALS

- Certificates: Submit certificate signed by professional ergineer certifying that location and A. elevation of improvements comply with requirements.
- Certified Surveys: Submit 3 copies signed by professional engineer B.
- Final Property Survey: Submit 4 copies showing the Work performed and ecord survey data. С.

1.3 QUALITY ASSURANCE

- Land Surveyor Quannearon. in jurisdiction where Project is located and who is capetron services of the kind indicated. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of the service of the kind indicated. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice A.
- B.

PART 2 - PRODUCTS

2.1

MATERIALS

General: Comply with requirements specified in other Sections.

- A. A. ART 3 EXECUTION 3.1 AMINATION
 - Existing Conditions: The existence and location of underground and other utilities and A. construction adjusted as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.
 - Before construction, verify the location and invert elevation at points of connection of 1. sanitary sewer, from sewer, and water-service piping; underground electrical services, and other utilities.
 - Furnish location data is work related to Project that must be performed by public 2. utilities serving Project vite.
 - Examination and Acceptance of Conditions: Before proceeding with each component of the В. Work, examine substrates, areas, and inditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
 - Examine roughing-in for mechanical and elevirial systems to verify actual locations of 1. connections before equipment and fixture installation.
 - 2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
 - Verify compatibility with and suitability of substrates including compatibility with 3. existing finishes or primers.
 - C. Proceed with installation only after unsatisfactory conditions have ben corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

- PREPARATION Existing Utility Information: Furnish information to local utility that a move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having invisidiction. A.
- B. other construction, verify dimensions of other construction by field measurements before

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

> fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

Space Requirements: Verify space requirements and dimensions of items shown C. diagrammatically on Drawings.

Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of Contractor, submit a request for information to Architect according to requirements in Section 013100 "Project Management and Coordination."

3.3

OP IN

STRUCTION LAYOUT

- Verification Before proceeding to lay out the Work, verify layout information shown on A. Drawings, in relation to the property survey and existing benchmarks. If discrepancies are discovered, notify Architect promptly.
- General: Engage a professional engineer to lay out the Work using accepted surveying B. practices.
 - Establish benchmark and control points to set lines and levels at each story of 1. construction and elsewhere is needed to locate each element of Project.
 - Establish limits on use of Project site. 2.
 - 3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
 - Inform installers of lines and levels to which they must comply. 4.
 - Check the location, level and plumb, of every major element as the Work progresses. 5.
 - Notify Architect when deviations from received lines and levels exceed allowable 6. tolerances.
 - Close site surveys with an error of closure equation or less than the standard established 7. by authorities having jurisdiction.
- Site Improvements: Locate and lay out site improvements, including pavements, grading, fill C. and topsoil placement, utility slopes, and rim and invert elevations.
- D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels.
- electrical WOIK. Level foundations and piers from two control work. Record deviations trom together levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the together available for reference by Architect. E.

3.4 FIELD ENGINEERING

OP NB. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.

Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.

Record benchmark locations, with horizontal and vertical data, on Project Record Documents.

- C. Certifier Burvey: On completion of foundation walls, major site improvements, and other work requiring first engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.
- Final Property Survey: Engage a professional engineer to prepare a final property survey D. showing significant features (real property) for Project. Include on the survey a certification, signed by professional engineer, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on the survey.
 - Recording: At Substantial Completion, have the final property survey recorded by or with 1. authorities having jurisdiction as the official "property survey."

3.5 **INSTALLATION**

- General: Locate the Work and components of the Work accurately, in correct alignment and A. elevation, as indicated.
 - Make vertical work plumb and make horizontal work revel. 1.
 - Where space is limited, install components to maximize mace available for maintenance 2. and ease of removal for replacement.
 - Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated. 3.
- Comply with manufacturer's written instructions and recommendations for installing products in B. applications indicated.
- Install products at the time and under conditions that will ensure the best possible results. C. Maintain conditions required for product performance until Substantial Completion.
- Conduct construction operations so no part of the Work is subjected in loading in excess of that expected during normal conditions of occupancy. Sequence the Work and allow adequate clearances to accommodate movement of construction items on site and placement in permanent locations. D.
- E.
- F.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

Templates: Obtain and distribute to the parties involved templates for work specified to be G. factory prepared and field installed. Check Shop Drawings of other work to confirm that OR INK adequate provisions are made for locating and installing products to comply with indicated requirements.

Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.

Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.

- R low for building movement, including thermal expansion and contraction.
- 3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anshors, that are to be embedded in concrete or masonry. Deliver such items to Project lite natime for installation.
- Joints: Make joints of wiferm width. Where joint locations in exposed work are not indicated, I. arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.
- Hazardous Materials: Use products, cleaners, and installation materials that are not considered J. hazardous.

CUTTING AND PATCHING 3.6

- Cutting and Patching, General: Employ skilled workers to perform cutting and patching. A. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
 - Cut in-place construction to provide for installation of other components or performance 1. of other construction, and subsequently patch as required to restore surfaces to their original condition.
- Temporary Support: Provide temporary support of work to be cur. B.
- Protection: Protect in-place construction during cutting and patching to prevent damage. C. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
- Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar D. operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
 - ions, including cate ing construction. If possible, review proposed proce-riginal Installer's written recommendations. In general, use hand or small power tools designed for sawing and grinding, not 's remaring and chopping. Cut holes and slots neatly to minimum size required, and with the source openings when not in use. 1.
 - 2.
 - Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a 3. diamond-core drill.

- Excavating and Backfilling: Comply with requirements in applicable Sections where 4. required by cutting and patching operations.
- 5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
- 6. Proceed with patching after construction operations requiring cutting are complete.

Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other ections, where applicable.

- spection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
- 2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.
- Floors and Walks: Where walls or partitions that are removed extend one finished area 3. into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
- Ceilings: Patch, repair, or reheng in-place ceilings as necessary to provide an even-plane 4. surface of uniform appearance.
- Exterior Building Enclosure: Pach components in a manner that restores enclosure to a 5. weathertight condition and ensure thermal and moisture integrity of building enclosure.
- Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, F. mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.7 PROGRESS CLEANING

Phy into the second sec

- General: Clean Project site and work areas daily, including common areas. Enforce A. requirements strictly. Dispose of materials lawfully.
 - Comply with requirements in NFPA 241 for removal of combustible waste materials and 1. debris.
 - Do not hold waste materials more than seven days during normal weather or three days if 2. the temperature is expected to rise above 80 deg F.
 - the temperature is expected.
 Containerize hazardous and unsanitary waste materials sequences containers appropriately and dispose of legally, according to regulations.
 Site: Maintain Project site free of waste materials and debris.
 Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for moner execution of the Work.
- B.
- C.

 - Where dust would impair proper execution of the Work, broom-clean or vacuum the 2. entire work area, as appropriate.

- Installed Work: Keep installed work clean. Clean installed surfaces according to written D. instructions of manufacturer or fabricator of product installed, using only cleaning materials OP INK specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.
 - Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

- Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways.
- During and installation, clean and protect construction in progress and adjoining H. material already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.
- Clean and provide maintenance on completed construction as frequently as necessary through I. the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
- Limiting Exposures: Supervise construction operations to assure that no part of the construction, J. completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.8 STARTING AND ADJUSTING

- Start equipment and operating components *to* confirm proper operation. Remove A. malfunctioning units, replace with new units, and recest
- Adjust equipment for proper operation. Adjust operating opponents for proper operation B. without binding.
- Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. C. Replace damaged and malfunctioning controls and equipment.
- D. Manufacturer's Field Service: Comply with qualification requirements in Section 014000 "Quality Requirements"

3.9 PROTECTION OF INSTALLED CONSTRUCTION

- rut damage Provide final protection and maintain conditions that ensure installed Work is without A. or deterioration at time of Substantial Completion.
- B. Comply with manufacturer's written instructions for temperature and relative humidity.

END OF SECTION 017300

SECTION 017419 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for the following:

Disposing of nonhazardous demolition and construction waste.

- Related Requirements: B.
 - 1. Section 024119 "Selective Structure Demolition" for disposition of waste resulting from partial demolition of buildings, structures, and site improvements.

1.2 DEFINITIONS

- Construction Waste: Building and site improvement materials and other solid waste resulting A. from construction, remodeling, repovation, or repair operations. Construction waste includes packaging.
- Demolition Waste: Building and site innrovement materials resulting from demolition or B. selective demolition operations.
- Removal off-site of demolition and construction waste and subsequent sale, C. Disposal: recycling, reuse, or deposit in landfill or incidentation acceptable to authorities having jurisdiction.
- Recycle: Recovery of demolition or construction waste for subsequent processing in D. preparation for reuse.
- E. Salvage: Recovery of demolition or construction waste and subsequences ale or reuse in another facility.
- Salvage and Reuse: Recovery of demonsci. incorporation into the Work. ACTION SUBMITTALS Waste Management Plan: Submit plan within 7 days of date established for commencement of the Work. F.
- 1.3
 - A.

1.4

A. Waste Reduction Progress Reports: Concurrent with each Application for Payment, submit report. Include the following information:

```
RSC Project No.73.19.002
```

CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

- 1. Material category.
- 2. Generation point of waste.
- 3. Total quantity of waste in tons.
- OP INK Waste Reduction Calculations: Before request for Substantial Completion, submit calculated end-of-Project rates for salvage, recycling, and disposal as a percentage of total waste generated by the Work.

Records of Donations: Indicate receipt and acceptance of salvageable waste donated to individuals and organizations. Indicate whether organization is tax exempt.

- Records of Sales: Indicate receipt and acceptance of salvageable waste sold to individuals and D. organizations. Indicate whether organization is tax exempt.
- Recycling and Processing Facility Records: Indicate receipt and acceptance of recyclable waste E. by recycling and processing facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- Landfill and Incinetator Disposal Records: Indicate receipt and acceptance of waste by landfills F. and incinerator facilities licensed to accept them. Include manifests, weight tickets, receipts, and invoices.
- Qualification Data: For waste management coordinator. G.

1.5 QUALITY ASSURANCE

Waste Management Conference: Conduct conference at Project site to comply with A. requirements in Section 013100 "Project Management and Coordination."

1.6 WASTE MANAGEMENT PLAN

- General: Develop a waste management plan according to ASIME 1609 and requirements in A. this Section. Plan shall consist of waste identification, waste reduction work plan, and cost/revenue analysis. Distinguish between demolition and construction waste. Indicate quantities by weight or volume, but use same units of measure throughout waste management plan.
- Waste Reduction Work Plan: List each type of waste and whether it will be salvaged, recycled, B. Reduction ... posed of in landfill or incinerator. ... type of waste, quantity for each means of recovery, and ... lures. Disposed Materials: Indicate how and where materials will be disposed of. Include mame address, and telephone number of each landfill and incinerator facility. totion Procedures: Include method that will be used for separating container labeling, and designated location or disposed of in landfill or incinerator. Include points of waste generation, total quantity of each type of waste, quantity for each means of recovery, and handling and transportation procedures.
 - 1.
 - 2.

PART 2 - PRODUCTS (Not Used)

OP NA PART 3 - EXECUTION

PLAN IMPLEMENTATION

General: Implement approved waste management plan. Provide handling, containers, storage, signage, transportation, and other items as required to implement waste management plan during the entire duration of the Contract.

- Wase Management Coordinator: Engage a waste management coordinator to be responsible B. for menting, monitoring, and reporting status of waste management work plan. Coordinator hall be present at Project site during by weekly to inspect and when waste container is replaced.
- Training: Train vorkers, subcontractors, and suppliers on proper waste management procedures, as appropriate for the Work occurring at Project site. C.
 - Distribute waste management plan to everyone concerned within three days of submittal 1. return.
 - 2. Distribute waste management plan to entities when they first begin work on-site. Review plan procedures and locations established for salvage, recycling, and disposal.
- Site Access and Temporary Controls: Conduct waste management operations to ensure D. minimum interference with roads, streets walks, walkways, and other adjacent occupied and used facilities.
 - Designate and label specific areas on Projecting necessary for separating materials that 1. are to be salvaged, recycled, reused, donated, and sold.
 - Comply with Section 015000 "Temporary Facilities" and Controls" for controlling dust 2. and dirt, environmental protection, and noise control

3.2 DISPOSAL OF WASTE

- General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove A. waste materials from Project site and legally dispose of them in a landral or incinerator materials ne... able to authorities having jurisure... Except as otherwise specified, do not allow waste materials that are ... accumulate on-site. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas. acceptable to authorities having jurisdiction.
 - 1.
 - 2.
- Burning: Do not burn waste materials. B.
- C. Burning: Burning of waste materials is permitted only at designated areas on Owner's property, provided required permits are obtained. Provide full-time monitoring for burning materials until fires are extinguished.

RSC Project No.73.19.002

CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL SECTION 017700 - CLOSEOUT PROCEDURES

14/N PART 1 - GENERAL

SUMMARY

Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

- Substantial Completion procedures.
- Final completion procedures. 2.
- 3. Warranties.
- Final cleaning. 4.
- 5. Repair of the Work.
- Related Requirements: B.
 - Section 013233 Protographic Documentation" for submitting final completion 1. construction photographic documentation.
 - Section 017823 "Operation and Maintenance Data" for operation and maintenance 2. manual requirements.
 - Section 017839 "Project Record Documents" for submitting record Drawings, record 3. Specifications, and record Product Date
 - Section 017900 "Demonstration and Training" for requirements for instructing Owner's 4. personnel.

1.2

1.4

pers.. CTION SUBMITTALS Product Data: For cleaning agents. Contractor's List of Incomplete Items: Initial submittal at Substantia Certified List of Incomplete Items: Final submittal at Final Completion "OUT SUBMITTALS "mage. "mage. Schedule of Maintenance Material Items: For maintenance material submittal items specified in Α. other Sections.

SUBSTANTIAL COMPLETION PROCEDURES 1.5

OPN^{B.} Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's punch list), indicating the value of each item on the list and reasons why the Work is incomplete.

Submittals Prior to Substantial Completion: Complete the following a minimum of 10 days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

Certificates of Release: Obtain and submit releases from authorities having jurisdiction permitting Owner unrestricted use of the Work and access to services and utilities. Aclude occupancy permits, operating certificates, and similar releases.

- Solution that the second submittals specified in other Division 01 Sections, including project 2. record ocuments, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
- 3. Submit closedup submittals specified in individual Sections, including specific warranties, workmanship bords, maintenance service agreements, final certifications, and similar documents.
- Submit maintenance material submittals specified in individual Sections, including tools, 4. spare parts, extra materials, and similar items, and deliver to location designated by Architect. Label with manufacturer's name and model number where applicable.
- 5. Submit test/adjust/balance records.
- Submit changeover information related to Owner's occupancy, use, operation, and 6. maintenance.
- Procedures Prior to Substantial Completion: complete the following a minimum of 10 days C. prior to requesting inspection for determining date Substantial Completion. List items below that are incomplete at time of request.
 - 1. Advise Owner of pending insurance changeover requirements.
 - Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's 2. personnel of changeover in security provisions.
 - Complete startup and testing of systems and equipment. 3.
 - Perform preventive maintenance on equipment used prior to Substantial Completion. 4.
 - Instruct Owner's personnel in operation, adjustment, and maintenance of products, 5. equipment, and systems. Submit demonstration and training video resordings specified in Section 017900 "Demonstration and Training."
 - Advise Owner of changeover in heat and other utilities. 6.
 - Participate with Owner in conducting inspection and walkthrough with local margency 7.
 - 8.
 - 9.
 - responders. Terminate and remove temporary facilities from Project site, along when construction tools, and similar elements. Complete final cleaning requirements, including touchup painting. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual 10.
- Inspection: Submit a written request for inspection to determine Substantial Completion a D. minimum of 10 days prior to date the work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of

unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.

- 1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
- 2. Results of completed inspection will form the basis of requirements for final completion.

FINAL COMPLETION PROCEDURES

- Preliminary Procedures: Before requesting final inspection for determining final completion, А. complete the following:
 - Submit a final Application for Payment according to Section 012900 "Payment 1. Procedures "
 - Certified List of Incomplete Items: Submit certified copy of Architect's Substantial 2. Completion list of items to be completed or corrected (punch list), endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
 - Certificate of Insurance: Submit evidence of final, continuing insurance coverage 3. complying with insurance requirements.
 - Submit pest-control final inspection report and warranty. 4.
 - 5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Submit a monstration and training video recordings.
- Inspection: Submit a written request for final inspection to determine acceptance. On receipt of B. request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.
 - Reinspection: Request reinspection when the Work identication in previous inspections as 1. incomplete is completed or corrected. °CIA

1.7 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

- Organization of List: Include name and identification of each space and area affected by A. construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction
 - 1.
 - ary, areas disturbed by C. Organize list of spaces in sequential order, starting with CARACTER proceeding from lowest floor to highest floor. Organize items applying to each space by major element, including categories for ceiling. Comparison of the space of the space by major element, including categories for ceiling. Comparison of the space of the 2.
 - 3.

SUBMITTAL OF PROJECT WARRANTIES 1.8

OP NR. Time of Submittal: Submit written warranties on request of Architect for designated portions of A. the Work where commencement of warranties other than date of Substantial Completion is indicated, or when delay in submittal of warranties might limit Owner's rights under warranty.

Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.

Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.

- novide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
- Identify each binder on the front and spine with the typed or printed title 3. "WARRANT ES," Project name, and name of Contractor.
- Warranty Electronic File: Scan warranties and bonds and assemble complete warranty 4. and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide bookmarked table of contents at beginning of document.
- Provide additional copies of each yearanty to include in operation and maintenance manuals. C. Nor

PART 2 - PRODUCTS

2.1 MATERIALS

- Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or A. fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surface
 - Use cleaning products that comply with Green Seal' \$37, or if GS-37 is not 1.

PART 3 - EXECUTION

3.1

- 1. Use cleaning products that comply with the California Courter applicable, use products that comply with the California Courter allowable VOC levels.
 EXECUTION
 FINAL CLEANING
 General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations. A.
- B. surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

- Complete the following cleaning operations before requesting inspection for certification 1. of Substantial Completion for entire Project or for a designated portion of Project:
 - Clean Project site, yard, and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - Remove tools, construction equipment, machinery, and surplus material from Project site.
 - Remove snow and ice to provide safe access to building.
 - Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural Methering of exterior surfaces. Restore reflective surfaces to their original condition.
 - Remove debris and surface dust from limited access spaces, including roofs, g. plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - Sweep concrete floors broom clean in unoccupied spaces. h.
 - Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean i. according to map afacturer's recommendations if visible soil or stains remain.
 - Clean transparent meterials, including mirrors and glass in doors and windows. j. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - Remove labels that are not permanent. k.
 - Wipe surfaces of mechanical and electrical equipment, elevator equipment, and 1. similar equipment. Remove excess Lorication, paint and mortar droppings, and other foreign substances.
 - Clean plumbing fixtures to a sanitary condition, free of stains, including stains m. resulting from water exposure.
 - Replace disposable air filters and clean permanent air filters. Clean exposed n. surfaces of diffusers, registers, and grills.
 - CIAL 0. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - Leave Project clean and ready for occupancy. p.

3.2 **REPAIR OF THE WORK**

- Complete repair and restoration operations before requesting inspection for determination of A.
- Complete repair and resultation of Substantial Completion. Repair or remove and replace defective construction. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and property adjusting operating equipment. Where damaged or worn items cannot be repaired or restored, replacements. Remove and replace operating components that cannot be repaired. B.

- Remove and replace chipped, scratched, and broken glass, reflective surfaces, and other 1. damaged transparent materials.
- 2. Touch up and otherwise repair and restore marred or exposed finishes and surfaces. Replace finishes and surfaces that that already show evidence of repair or restoration.
 - Do not paint over "UL" and other required labels and identification, including a. mechanical and electrical nameplates. Remove paint applied to required labels and identification.

Replace parts subject to operating conditions during construction that may impede

PR INA

SECTION 017839 - PROJECT RECORD DOCUMENTS 12 AV PART 1 - GENERAL SUMMARY Section includes administrative and procedural requirements for project record documents, Nuding the following: ecord Drawings. CLOSEOUT SUBMITTALS 1.2 Α. Record Drawings: comply with the following: Number of Copies: Submit copies of record Drawings as follows: 1. Initial Submitte a. Submit two paper-copy set(s) of marked-up record prints. 1) Architect will indighte whether general scope of changes, additional information recorded and quality of drafting are acceptable. 2) b. Final Submittal: Submit three paper-copy set(s) of marked-up record prints. 1) Print each drawing, whether or not thanges and additional information were 2) recorded. ×1CIA PART 2 - PRODUCTS 2.1 **RECORD DRAWINGS** Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop A. Drawings, incorporating new and revised Drawings as modifications are issued.

- Preparation: Mark record prints to show the actual installation where installa 1. ries from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide They information for preparation of corresponding marked-up record prints.
 - Give particular attention to information on concealed elements that would be a. difficult to identify or measure and record later.
 - Record data as soon as possible after obtaining it. b.
 - Record and check the markup before enclosing concealed installations. c.

- Mark the Contract Drawings and Shop Drawings completely and accurately. Use 2. personnel proficient at recording graphic information in production of marked-up record prints.
- 3. Mark record sets with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
- 4. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

OP INK Format: Identify and date each record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.

- Record Prints: Organize record prints and newly prepared record Drawings into nanageable sets. Bind each set with durable paper cover sheets. Include identification on over sheets.
- 2. Identification: As follows:
 - Project name. a.
 - Date. b.
 - Designation "PROJECT RECORD DRAWINGS." c.
 - Name of Architect and Construction Manager. d.
 - Name of Contractor. e.

MISCELLANEOUS RECORD SUBMITTALS 2.2

- Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file A. miscellaneous records and identify each, ready or continued use and reference.
- B. Format: Submit miscellaneous record submittals as DD electronic file.

PART 3 - EXECUTION

3.1 **RECORDING AND MAINTENANCE**

- Recording: Maintain one copy of each submittal during the construction period for project A. record document purposes. Post changes and revisions to project record documents as they occur; do not wait until end of Project.
- Maintenance of Record Documents and Samples: Store record documents and Samples in the B. field office apart from the Contract Local documents for construction purposes. Maintain record documents in good dry, legible condition, protected from deterioration and loss. Provide access to project record documents for Architect's and Construction Manager's reference during normal working hours.

END OF SECTION 017839

SECTION 024119 - SELECTIVE DEMOLITION

12 N. PART 1 - GENERAL

SUMMARY

Section Includes:

Demolition and removal of selected portions of building or structure.

- MATERAL OWNERSHIP 1.2
 - Unless otherwise indicated, demolition waste becomes property of Contractor. Α.

1.3 INFORMATIONAL SUBMITTALS

Proposed Protection Measures, Submit report, including Drawings, that indicates the measures A. proposed for protecting individuals and property, for dust control and, for noise control. Indicate proposed locations and construction of barriers.

1.4 FIELD CONDITIONS

- Owner will occupy portions of building immediately adjacent to selective demolition area. A. Conduct selective demolition so Owner's operations will not be disrupted.
- B. Conditions existing at time of inspection for bidding surpose will be maintained by Owner as far as practical.
- Notify Architect of discrepancies between existing conditions appropriate proceeding C. with selective demolition.
- Hazardous Materials: It is not expected that hazardous materials will be incountered in the D. Work.
 - Hazardous materials will be removed by Owner before start of the Work. 1.
 - If suspected hazardous materials are encountered, do not disturb; immediately notify 2. Architect and Owner. Hazardous materials will be removed by Owner under contract.
- E. Storage or sale of removed items or materials on-site is not permitted.
- MENT F. Utility Service: Maintain existing utilities indicated to remain in service and protect them against damage during selective demolition operations.
 - 1. Maintain fire-protection facilities in service during selective demolition operations.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

1.5 WARRANTY

IART 2 - PRODUCTS Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged A. during selective demolition, by methods and with materials and using approved contractors so as not to void existing warranties.

PERFORMANCE REOUIREMENTS

- Regulatory Requirements: Comply with governing EPA notification regulations before Α. beginning selective demolition. Comply with hauling and disposal regulations of authorities having jurischetion.
- Standards: Comply with ASSE A10.6 and NFPA 241. B.

01

PART 3 - EXECUTION

3.1 **EXAMINATION**

Verify that utilities have been disconnected and capped before starting selective demolition A. operations.

UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS 3.2

A. Existing Services/Systems to Remain: Maintain services/systems indicated to remain and protect them against damage.

PROTECTION 3.3

- Temporary Protection: Provide temporary barricades and other protection required to prevent A. injury to people and damage to adjacent buildings and facilities to remain.
- Temporary Shoring: Design, provide, and maintain shoring, bracing, and structural supports as B. required to preserve stability and prevent movement, settlement, or collapse of construction and finishes to remain, and to prevent unexpected or uncontrolled movement or ollapse of construction being demolished.
- C. Remove temporary barricades and protections where hazards no longer exist.

3.4 SELECTIVE DEMOLITION

- CUNENT General: Demolish and remove existing construction only to the extent required by new A. construction and as indicated. Use methods required to complete the Work within limitations of governing regulations and as follows:
- RSC Project No.73.19.002 SELECTIVE DEMOLITION

- Neatly cut openings and holes plumb, square, and true to dimensions required. Use 1. cutting methods least likely to damage construction to remain or adjoining construction. Use hand tools or small power tools designed for sawing or grinding, not hammering and chopping. Temporarily cover openings to remain.
- 2. Cut or drill from the exposed or finished side into concealed surfaces to avoid marring existing finished surfaces.
- 3. Do not use cutting torches until work area is cleared of flammable materials. At concealed spaces, such as duct and pipe interiors, verify condition and contents of hidden space before starting flame-cutting operations. Maintain portable fire-suppression devices during flame-cutting operations.

Locate selective demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.

- Dispose of demolished items and materials promptly.
- Site Access and Temporary Controls: Conduct selective demolition and debris-removal B. operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.
- Existing Items to Remain Protect construction indicated to remain against damage and soiling C. during selective demolition. When permitted by Architect, items may be removed to a suitable, protected storage location luting selective demolition and cleaned and reinstalled in their original locations after selective demolition operations are complete.

3.5 CLEANING

OR INA,

- Remove demolition waste materials from roject site Α.
 - Do not allow demolished materials to accumulate on-site. 1.
 - Remove and transport debris in a manner that will prevent spillage on adjacent surfaces 2. and areas.
 - Remove debris from elevated portions of building by thute, hoist, or other device that 3. will convey debris to grade level in a controlled desce
- B. Burning: Do not burn demolished materials.
- Clean adjacent areas of dust, dirt, and debris caused by selective demotition operations. Return C. adjacent areas to condition existing before selective demolition operations began OOCUMIENT

END OF SECTION 024119

12/N PART 1 - GENERAL

RELATED DOCUMENTS

SECTION 033000 - CAST-IN-PLACE CONCRETE

Drawings and general provisions of the Contract, including General and Supplementary Anditions and Division 01 Specification Sections, apply to this Section.

SUMMARY 1.2

- This Section specifies cast-in place concrete, including formwork, reinforcement, concrete A. materials, mixing design, placement procedures, and finishes, for the following:
 - Footings. 1.
 - Foundation walls 2.
 - 3. Concrete walkwivs
- Related Sections include the following: B.
 - Division 31 Section "Earthy ork" for drainage fill under slabs-on-grade. 1.

DEFINITIONS 1.3

Cementitious Materials: White portland cement alone or in combination with one or more of A. the following: blended hydraulic cement, fly ash and other pozzolans, ground granulated blastfurnace slag, and silica fume; subject to compliance with requirements.

1.4 **SUBMITTALS**

- Product Data: For each type of product indicated. A.
- Design Mixtures: For each concrete mixture. Submit alternate design mixtures when B. characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
- g, a. pent ban spacing, Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and C. placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hope and supports for concrete reinforcement.
- D. Samples: For waterstops and vapor retarder.
- E. Welding certificates.
- F. Qualification Data: For installer, manufacturer and testing agency.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- Material Test Reports: For the following, from a qualified testing agency, indicating G. compliance with requirements: OP NA
 - Aggregates. Include service record data indicating absence of deleterious expansion of 1. concrete due to alkali aggregate reactivity.
 - Material Certificates: For each of the following, signed by manufacturers:
 - 1. Cementitious materials.
 - 2. Admixtures.
 - Form materials and form-release agents.
 - Steel reinforcement and accessories.
 - Fiber reinforcement.
 - aterstops.
 - 7. Suring compounds.
 - Bonding agents. 8.
 - 9.
 - Adhesives Vapor retarders. 10.
 - Semi-rigid joint filler. 11.
 - Joint-filler strips. 12.
 - 13. **Repair** materials
 - I. Field quality-control test and property.
 - Minutes of preinstallation conference. J.
 - 1.5 QUALITY ASSURANCE
 - Installer Qualifications: A qualified installer who employs on Project personnel qualified as A. ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.
 - Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete B. products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
 - Manufacturer certified according to NRMCA's "Certification of heady Mixed Concrete 1. Production Facilities."
 - Testing Agency Qualifications: An independent agency, acceptable to uthorities having C. jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated, as documented according to ASTM E 548.
 - Personnel conducting field tests shall be qualified as ACI Concrete Field ting 1. Technician, Grade 1, according to ACI CP-01 or an equivalent certification program.
 - Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing 2. TEN, Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician -Grade II.
 - D. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from one source, and obtain admixtures through one source from a single manufacturer.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- E. Welding: Qualify procedures and personnel according to AWS D1.4, "Structural Welding Code--Reinforcing Steel."
- OR IN SC ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:
 - 1. ACI 301, "Specification for Structural Concrete," Sections 1 through 5.
 - ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.

- Installation Conference: Conduct conference at Project site to comply with requirements in H. Division 01 Section "Project Management and Coordination."
 - B for submitting design mixtures, review concrete design mixture and examine 1. procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:
 - Contractor's superintendent. a.
 - Independent testing agency responsible for concrete design mixtures. b.
 - Ready-mix concrete manufacturer. c.
 - Concrete subcontractor. d.
 - Review special inspection and testing and inspecting agency procedures for field quality 2. control, concrete finishes and finishing, cold- and hot-weather concreting procedures, curing procedures, construction optraction and isolation joints, and joint-filler strips, semi-rigid joint fillers, forms and form removal limitations, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, floor and slab flatness and levelness neasurement, concrete repair procedures, and concrete protection.

1.6 DELIVERY, STORAGE, AND HANDLING

- Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and A. damage.
- Waterstops: Store waterstops under cover to protect from moisture, unlight, dirt, oil, and other B. contaminants.

1.7 **MEASUREMENTS**

2.

- Field Measurements: Obtain all field measurements required for proper fabrication and A. installation of work. Submit prior to installation, all measurements indicating discrebancies from the drawings. Describe in writing, and where applicable, by sketches proposed methods, of correcting the discrepancies. Measurements are the responsibility of the contractor.
- MENT Lay out each part of the work in strict accordance with the architectural, structural, mechanical, B. electrical, plumbing and all other drawings and be responsible for correct location of the same. Lay out from at least two pre-established benchmarks and axis lines, individually correct for length and bearing.

C. Templates: Furnish templates and layout drawings for exact locations of items to be embedded in concrete, with setting instructions required for installation of embedded items.

1911 PART 2 - PRODUCTS

MANUFACTURERS

In other Part 2 articles where titles below introduce lists, the following requirements apply to roduct selection:

- Subject to compliance with requirements, provide one of the products Products: specified.
- Menufacturers: Subject to compliance with requirements, provide products by one of the 2. manufacturers specified.

FORM-FACING MATERIALS 2.2

- Smooth-Formed Finisled concrete: Form-facing panels that will provide continuous, true, and Α. smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.
 - 1. Plywood, metal, or other approved panel materials.
 - 2. Styrene plastic formliner, single use, smooth sheet pattern # 8008 by Customrock formliner or approved equal.
- Chamfer Strips: Wood, metal, PVC, or rubbe strips, 3/4 by 3/4 inch (19 x 19mm), minimum. B.
- Form-Release Agent: Commercially formulated form-release agent that will not bond with, C. stain, or adversely affect concrete surfaces and with not impair subsequent treatments of concrete surfaces.
 - Formulate form-release agent with rust inhibitor for steel form-facing materials. 1.
- Form Ties: Factory-fabricated, removable or snap-off metal or snap-off metal D. form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.
 - Furnish units that will leave no corrodible metal closer than 1 inch (5mm) to the plane 1 of exposed concrete surface.
 - Furnish ties with integral water-barrier plates to walls indicated to receive daupproofing PP-CUMENT 2. or waterproofing.

2.3 STEEL REINFORCEMENT

- A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.
- Steel Bar Mats: ASTM A 184/A 184M, fabricated from ASTM A 615/A 615M, Grade 60. B. deformed bars, assembled with clips.
- C. Plain-Steel Wire: ASTM A 82, as drawn.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- D. Deformed-Steel Wire: ASTM A 496.
- Plain-Steel Welded Wire Reinforcement: ASTM A 185, plain, fabricated from as-drawn steel wire into flat sheets.

REINFORCEMENT ACCESSORIES

Joint Dowel Bars: ASTM A 615/A 615M, Grade 60, plain-steel bars, cut bars true to length with ends square and free of burrs.

- Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and В. facturing reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from stee wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater coopressive strength than concrete and as follows:
 - 1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.5 CONCRETE MATERIAL

- Cementitious Material: Use the following cementitious materials, of the same type, brand, and A. source, throughout Project:
 - Portland Cement: ASTM C 150, Type I/II. Supplement with the following: 1.
 - Fly Ash: ASTM C 618, Class a.
 - Ground Granulated Blast-Fur ace Slag: ASTM C 989, Grade 100 or 120. b.
- Silica Fume: ASTM C 1240, amorphous silica. B.
- Normal-Weight Aggregates: ASTM C 33, Class Charse aggregate or better, graded. C. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.
 - 1. Maximum Coarse-Aggregate Size: 1 inch (25mm) nominal.
- D.

2.6

- A.
- Maximum Coarse-Aggregate Size. 1.1
 Fine Aggregate: Free of materials with deleterious reactivity to alkan in come...
 Water: ASTM C 94/C 94M and potable.
 ADMIXTURES
 Air-Entraining Admixture: ASTM C 260.
 Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride. B.

 - Retarding Admixture: ASTM C 494/C 494M, Type B. 2.
 - Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D. 3.

RSC Project No.73.19.002 CAST-IN-PLACE CONCRETE

- High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F. 4.
- 5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
- 6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

FIBER REINFORCEMENT

Synthetic Fiber: Monofilament or fibrillated polypropylene fibers engineered and designed for use in concrete pavement, complying with ASTM C 1116, Type III, 1/2 to 1-1/2 inches (13 to 28 mm) long.

Products:

PR NA

Monofilament Fibers:

- Axim Concrete Technologies; Fibrasol IIP.
- Euclid Chemical Company (The); Fiberstrand 100.
- EORTA Corporation; Forta Mono.
- Grace Construction Products, W. R. Grace & Co.; Grace MicroFiber. 4)
- ST Concrete Systems; Fibermix Stealth. 5)
- b. Fibrillated Fibris:
 - Axim Concrete Technologies; Fibrasol F. 1)
 - Euclid Chemical Company (The); Fiberstrand F. 2)
 - FORTA Corporation; Forta. 3)
 - Grace Construction Joducts, W. R. Grace & Co.; Grace Fibers. 4)
 - 5) SI Concrete Systems; Fibermesh.

2.8 WATERSTOPS

- Flexible PVC Waterstops: CE CRD-C 572, with factory installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, A.
- Flexible PVC Waterstops: CE CRE CELE
 in concrete to prevent passage of fluids through joints. Factory rabilities contained and directional changes.
 Manufacturers:

 a. Bometals, Inc.
 b. Greenstreak.
 c. Meadows, W. R., Inc.
 d. Progress Unlimited, Inc.
 e. Tamms Industries, Inc.
 f. Vinylex Corp.

 Profile: Ribbed with center bulb.
 Dimensions: 6 inches by 3/8 inch (150 mm by 10 mm) thick; non-tapered.
 Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch. B.
 - - a. Colloid Environmental Technologies Company; Volclay Waterstop-RX.
 - Concrete Sealants Inc.; Conseal CS-231. b.

RSC Project No.73.19.002

CAST-IN-PLACE CONCRETE

- Greenstreak; Swellstop. c.
- Henry Company, Sealants Division; Hydro-Flex. d.
- Progress Unlimited, Inc.; Superstop. e.
- TCMiraDRI; Mirastop. f.

CURING MATERIALS

P P P P P P Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

Products:

Axim Concrete Technologies; Cimfilm.

- Burke by Edoco; BurkeFilm.
- ShemMasters; Spray-Film.
- Conspec Marketing & Manufacturing Co., Inc., a Dayton Superior Company; Aquatilm.
- Dayton Superior Corporation; Sure Film. e.

 - Meadows, W. R., Inc.; Vocomp-20. i.
 - Symons Corporation, a Dayton Superior Company; Cure & Seal 18 Percent E. į.

- Clear, Waterborne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, F. R INKO Type 1, Class A.
 - 1. Products:
 - Burke by Edoco; Cureseal 1315 WB. a.
 - ChemMasters; Polyseal WB. b.
 - Conspec Marketing & Manufacturing Co., Inc., a Davton Superior Company: c. Sealcure 1315 WB.
 - Euclid Chemical Company (The); Super Diamond Clear VOX. d.
 - Lambert Corporation; UV Safe Seal. e.
 - L&M Construction Chemicals, Inc.; Lumiseal WB Plus.
 - Meadows, W. R., Inc.; Vocomp-30.
 - Symons Corporation, a Dayton Superior Company; Cure & Seal 31 Percent E.
 - RELATED MATERIALS 2.10
 - Expansion- and isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber A. or ASTM D 1752, ork or self-expanding cork.
 - Semi-rigid Joint Filler. The component, semi-rigid, 100 percent solids, epoxy resin with a B. Type A shore durometer having ss of 80 per ASTM D 2240.
 - ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene C. Bonding Agent: butadiene.
 - Epoxy Bonding Adhesive: ASTM C 81, wo-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class satisfies for application temperature and of grade D. to suit requirements, and as follows:
 - 1. Types I and II, non-load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.
 - Reglets: Fabricate reglets of not less than 0.0217 inch (0.55m) thick, galvanized steel sheet. E. Temporarily fill or cover face opening of reglet to prevent intrustor of concrete or debris.
 - Dovetail Anchor Slots: Hot-dip galvanized steel sheet, not less man 0,0336 inch (0.85 mm) F. thick, with bent tab anchors. Temporarily fill or cover face opening of eless to prevent intrusion of concrete or debris.

2.11 **REPAIR MATERIALS**

- Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be A. r Underlayment. Com. ed in thicknesses from 1/8 inch (3.2 mm) and mat com. ent floor elevations. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic the defined in ASTM C 219. Continer recommended for substrate, conditions, applied in thicknesses from 1/8 inch (3.2 mm) and that can be feathered at edges to match adjacent floor elevations.
 - 1.
 - 2.
 - Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch (3.2 to 6 mm) or coarse sand as 3. recommended by underlayment manufacturer.

RSC Project No.73.19.002 CAST-IN-PLACE CONCRETE Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- Compressive Strength: Not less than 4100 psi at 28 days when tested according to 4. ASTM C 109/C 109M.
- PR MAG Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch (0.32 mm) and that can be feathered at edges to match adjacent floor elevations.
 - Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
 - Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
 - Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch (3.2 to 6 mm) or coarse sand as recommended by topping manufacturer.
 - compressive Strength: Not less than 5000 psi at 28 days when tested according to ATTM C 109/C 109M.

CONCRETE AIXTURES, GENERAL 2.12

1.

- Prepare design mixtures for each type and strength of concrete, proportioned on the basis of A. laboratory trial mixture or field test data, or both, according to ACI 301.
 - Use a qualified independent testing agency for preparing and reporting proposed mixture 1. designs based on laboratory trial mixtures.
- Cementitious Materials: Limit percentage, by weight, of cementitious materials other than B. portland cement in concrete as follows.
 - 1. Fly Ash: 25 percent.
 - Combined Fly Ash and Pozzolan: 25 percent. 2.
 - Ground Granulated Blast-Furnace Slag: 50 percent. 3.
 - Combined Fly Ash or Pozzolan and Ground Archulated Blast-Furnace Slag: 50 percent 4. portland cement minimum, with fly ash or pozzolar not exceeding 25 percent.
 - Silica Fume: 10 percent. 5.
 - Combined Fly Ash, Pozzolans, and Silica Fume: 35 percent with fly ash or pozzolans not 6. exceeding 25 percent and silica fume not exceeding 10 percent.
- C. Limit water-soluble, chloride-ion content in hardened concrete to 1.50 percent by weight of cement.
- Admixtures: Use admixtures according to manufacturer's written instructions D.
 - Use water-reducing, high-range water-reducing, or plasticizing admixture in concrete, as 1. required, for placement and workability.
 - 2.
 - required, for placement Use water-reducing and retarding admixime much humidity, or other adverse placement conditions. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a state-commentitious materials ratio below 0.50. 3.
- E. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

CONCRETE MIXTURES FOR BUILDING ELEMENTS 2.13

- OR INA Footings and Foundation Walls: Proportion normal-weight concrete mixture as follows:
 - 1. Minimum Compressive Strength: 4,000 psi at 28 days.
 - 2. Maximum Water-Cementitious Materials Ratio: 0.45.
 - Slump Limit: 8 inches (200 mm) for concrete with verified slump of 2 to 4 inches (50 to 3. 100 mm) before adding high-range water-reducing admixture or plasticizing admixture, plus or minus 1 inch (25 mm).

Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 1 inch (25 mm) nominal maximum aggregate size.

- B.
- **R**-on-Grade: Proportion normal-weight concrete mixture as follows:
- Minum Compressive Strength: 4,000 psi at 28 days. 1.
- 2. Miniprom Cementitious Materials Content: 520 lb/cu. yd.
- Slump Limit: 4 inches (100 mm), plus or minus 1 inch (25 mm). 3.
- Air Content, Do not allow air content of troweled finished floors to exceed 3 percent. 4.
- Synthetic For Uniformly disperse in concrete mixture at manufacturer's recommended 5. rate, but not less than 1.5 lb/cu. yd.
- Suspended Slabs: Proportion structural normal-weight concrete mixture as follows: C.
 - Minimum Compressive Strength: 4,000 psi at 28 days. 1.
 - Minimum Cementitious Materials Content: 520 lb/cu. yd. 2.
 - Slump Limit: 4 inches, plus or minus 1 inch. 3.
 - Air Content: Do not allow air content of troweled finished floors to exceed 3 percent. 4.
 - Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended 5. rate, but not less than 1.0 lb/cu. yd.

2.14 FABRICATING REINFORCEMENT

Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice." А.

2.15 CONCRETE MIXING

- Measure, batch, mix, and deliver concrete according to Ready-Mixed Concrete: A. ASTM C 94/C 94M and ASTM C 1116, and furnish batch ticket information
 - When air temperature is between 85 and 90 deg F (30 and 32 deg C), reduce mixing and 1. delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F (32 deg C), reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK

CUMENT Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, A. lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

- Construct formwork so concrete members and structures are of size, shape, alignment, B. elevation, and position indicated, within tolerance limits of ACI 117. OP MA
 - Limit concrete surface irregularities, designated by ACI 347R as abrupt or gradual, as follows:
 - 1. Class A, 1/8 inch for smooth-formed finished surfaces.
 - 2. Class B, 1/4 inch for rough-formed finished surfaces.

Construct forms tight enough to prevent loss of concrete mortar.

- Fabricate forms for easy removal without hammering or prying against concrete surfaces. Redvide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
 - Install keyways, reglets, recesses, and the like, for easy removal. 1.
 - 2. D no use rust-stained steel form-facing material.
- Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required F. elevations and stores in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off emplates or compacting-type screeds.
- Provide temporary openings for cleanouts and inspection ports where interior area of formwork G. is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete martar Locate temporary openings in forms at inconspicuous locations.
- Chamfer exterior corners and edges of permanently exposed concrete. H.
- I. Form openings, chases, offsets, sinkages, keyyays, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.
- Clean forms and adjacent surfaces to receive concrete. Bemove chips, wood, sawdust, dirt, and J. other debris just before placing concrete.
- Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and K. maintain proper alignment.
- Coat contact surfaces of forms with form-release agent, according to hanufacturer's written L. instructions, before placing reinforcement.

3.2 **EMBEDDED ITEMS**

- Place and secure anchorage devices and other embedded items required for adjoining A. is attached to or supported by cast-in-place concrete. Use setting drawings, template diagrams, instructions, and directions furnished with items to be embedded.
 - and secure anomalo ached to or supported by cast-in-place concrete. ams, instructions, and directions furnished with items to be embedded. Install anchor rods, accurately located, to elevations required and complying with Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and 1.
 - 2. of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.

3. Install dovetail anchor slots in concrete structures as indicated.

3.3REMOVING AND REUSING FORMSA.General: Formwork for sides of beams,
not support weight of concrete may be
(10 deg C) for 24 hours after proval operations and
operations and

General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F (10 deg C) for 24 hours after placing concrete, if concrete is hard enough to not be damaged by form-removal operations and curing and protection operations are maintained.

Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

- B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise canaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.
- C. When forms are reased, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 SHORES AND RESHORES

- A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.
- 3.5 STEEL REINFORCEMENT
 - A. General: Comply with CRSI's "Manual of Standard Provide" for placing reinforcement.
 - 1. Do not cut or puncture vapor retarder. Repair danage and reseal vapor retarder before placing concrete.
 - B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.
 - C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete over. Do not tack weld crossing reinforcing bars.
 - 1. Weld reinforcing bars according to AWS D1.4, where indicated.
 - D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.
 - E. Install welded wire reinforcement in longest practicable lengths on bar supports space to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

- 3.6 JOINTS
 - General: Construct joints true to line with faces perpendicular to surface plane of concrete.
- OP MAG Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.
 - 1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints, unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
 - Form keyed joints as indicated. Embed keys at least 1-1/2 inches (38 mm) into concrete.
 - Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
 - Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and 4. girders and at the top of footings or floor slabs.
 - 5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, ind in concealed locations where possible.
 - Use a bonding agent at locations where fresh concrete is placed against hardened or 6. partially hardened concrete surfaces.
 - Use epoxy-bonding achesive at locations where fresh concrete is placed against hardened 7. or partially hardened on crete surfaces.
 - Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning C. concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:
 - Grooved Joints: Form contraction joints after initial floating by grooving and finishing 1. each edge of joint to a radius of 1/8 inch (3.2 mm). Repeat grooving of contraction joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
 - Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8 ipch (3.2 mm) wide joints into concrete 2. when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.
 - Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab D. junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

3.7

other locations, as much
Extend joint-filler strips full width and depth of joint, terminating concrete surface, unless otherwise indicated.
Install joint-filler strips in lengths as long as practicable. Where more that one length is required, lace or clip sections together.
WATERSTOPS
Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed to a final the Work. Field fabricate joints in waterstops according to the work. A.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, В. according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and 3.8 1 2 firmly pressing into place. Install in longest lengths practicable.

CONCRETE PLACEMENT

Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.

the not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.

- Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new C. concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete p avoid segregation.
 - Deposit corcete in horizontal layers of depth to not exceed formwork design pressures 1. and in a manner to avoid inclined construction joints. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
 - 2.
 - Do not use vibrators o transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 3. inches into preceding layer Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing traverse constituents to segregate.
- Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of D. construction joints, until placement of a panel or section is complete.
 - Consolidate concrete during placement operations so concrete is thoroughly worked 1. around reinforcement and other embedded items and into corners.
 - 2. Maintain reinforcement in position on chairs during concrete placement.
 - Screed slab surfaces with a straightedge and strike off to sovect elevations. 3.
 - Slope surfaces uniformly to drains where required. 4.
 - Begin initial floating using bull floats or darbies to form a uniform and open-textured 5. surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.
- Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from E. physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
 - When average high and low temperature for three successive days, maintain delivered concrete mixture temperature temperature range required by ACI 301. Do not use frozen materials or materials containing ice or snow. Do not place concrete for other materials. 1.
 - 2.
 - 3.
- F. Hot-Weather Placement: Comply with ACI 301 and as follows:

- Maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled 1. mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
- Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep 2. subgrade uniformly moist without standing water, soft spots, or dry areas.

FINISHING FORMED SURFACES

- hough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.
- Apply to concrete surfaces not exposed to public view. 1.
- Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in B. an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove ins and other projections that exceed specified limits on formed-surface irregularities.
 - Apply to concrete surgers exposed to public view, to receive a rubbed finish, and/or to 1. be covered with a coating or covering material applied directly to concrete.
- C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:
 - Smooth-Rubbed Finish: Not later that one day after form removal, moisten concrete 1. surfaces and rub with carborundum price or another abrasive until producing a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.
 - Grout-Cleaned Finish: Wet concrete surfaces and apply grout of a consistency of thick 2. paint to coat surfaces and fill small holes. Mix one part portland cement to one and onehalf parts fine sand with a 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches a polor of dry grout will match adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens,
 - rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours. Cork-Floated Finish: Wet concrete surfaces and apply a siff grout. Mix one part portland cement and one part fine sand with a 1:1 mixture of bonding agent and water. 3. Add white portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Compress grout into voids by grinding surface. In a
- Win --swirling motion, finish surmer. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar ----adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacentformed surfaces, unless otherwise indicated. D.

3.10

General: Comply with ACI 302.1R recommendations for screeding, restraightening, and A. finishing operations for concrete surfaces. Do not wet concrete surfaces.

RSC Project No.73.19.002 CAST-IN-PLACE CONCRETE

- Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-В. floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4OR INS inch in 1 direction.
 - Apply scratch finish to surfaces to receive mortar setting beds for bonded cementitious 1. floor finishes.

Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

Apply float finish to surfaces to receive trowel finish and to be covered with fluid-applied sheet waterproofing, built-up or membrane roofing, or sand-bed terrazzo.

- D. Trowel inix: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
 - Apply a trowel funsh to surfaces exposed to view or to be covered with resilient flooring, 1. carpet, ceramic a durry tile set over a cleavage membrane, paint, or another thin-filmfinish coating system. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly
 - 2. trafficked floor surface:
 - Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flappess F(F) 17; and of levelness, F(L) 15. a.
- Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces where ceramic or quarry E. tile is to be installed by either thickset or thin-set method. While concrete is still plastic, slightly scarify surface with a fine broom.
 - Comply with flatness and levelness tolerances for rowel finished floor surfaces. 1.
- Broom Finish: Apply a broom finish to exterior concrete platforms, steps, and ramps, and F. elsewhere as indicated.
 - Immediately after float finishing, slightly roughen trafficked surface by brooming with 1. fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

3.11

- MISCELLANEOUS CONCRETE Filling In: Fill in holes and openings left in concrete structures, unless ourse after work of other trades is in place. Mix, place, and cure concrete, as specified, to blend win in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work. A.
- B. terminations slightly rounded.

Bergen Community College – Baseball Fields Improvements 400 Paramus Road, Paramus, NJ 07652

- Equipment Bases and Foundations: Provide machine and equipment bases and foundations as C. shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, **OPMA** 12 complying with diagrams or templates from manufacturer furnishing machines and equipment.
 - Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as shown on Drawings. Screed, tamp, and trowel-finish concrete surfaces.

CONCRETE PROTECTING AND CURING

- reperal: Protect freshly placed concrete from premature drying and excessive cold or hot A. temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hotweather protection during curing.
- Evaporation Reporter: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or B. windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h (1 kg/sq. m x h) before and during finishing depations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.
- Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported C. slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.
- Unformed Surfaces: Begin curing interestiately after finishing concrete. Cure unformed D. surfaces, including floors and slabs, concrete floor toppings, and other surfaces.
- Cure concrete according to ACI 308.1, by one or a combination of the following methods: E.
 - Moisture Curing: Keep surfaces continuously for not less than seven days with the 1. following materials:
 - Water. a.
 - Continuous water-fog spray. b.
 - Absorptive cover, water saturated, and kept continuously wet. Cover concrete c. surfaces and edges with 12-inch lap over adjacent absorptive covers.
 - Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining 2. cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Curs for pot less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
 - a.
 - b.
 - c.
 - Curing Compound: Apply uniformly in continuous operation by power spray or roller 3. according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall

within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

- After curing period has elapsed, remove curing compound without damaging a. concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.
- Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.
- JOINT VILLING 3.13

OR INE

- Prepare, clean and install joint filler according to manufacturer's written instructions. A.
- Defer joint filling until concrete has aged at least one month. Do not fill joints until construction traffic has permanently ceased. 1.
- Remove dirt, debris, saw cattings, curing compounds, and sealers from joints; leave contact B. faces of joint clean and dry.
- Install semi-rigid joint filler full depth a saw-cut joints and at least 2 inches (50 mm) deep in C. formed joints. Overfill joint and trim jobe filler flush with top of joint after hardening.

3.14 CONCRETE SURFACE REPAIRS

- Defective Concrete: Repair and patch defective areas when approved by Architect. Remove A. and replace concrete that cannot be repaired and patched to Architect's approval.
- Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two B. and one-half parts fine aggregate passing a No. 16 (1.18 mm) sieve using only enough water for handling and placing.
- Repairing Formed Surfaces: Surface defects include color and texture regularities, cracks, C. spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
 - 1. Immediately after form removal, cut out honeycombs, rock pockets, and votes more than Immediately and 1/2 inch (13 mm) in any dimension in some depth. Make edges of cuts perpendicular to concrete surface. Cican, and and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or con-burge secured in place with bonding agent.
 - 2. color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.

- Repair defects on concealed formed surfaces that affect concrete's durability and 3. structural performance as determined by Architect.
- OP MAG Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.
 - 1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch (0.25 mm) wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
 - After concrete has cured at least 14 days, correct high areas by grinding.
 - Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired arras b blend into adjacent concrete.
 - 4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare mix, and apply repair underlayment and primer according to manufacturer's written insudctions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
 - 5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a mulmum repair topping depth of 1/4 inch (6 mm) to match adjacent floor elevations. Proste, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
 - Repair defective areas, except random cracks and single holes 1 inch (25 mm) or less in 6. diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch (19 mm) clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Pleze, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
 - Repair random cracks and single holes 1 inch (25 mm) or less in diameter with patching 7. mortar. Groove top of cracks and cut out holes to support on the stand of the stand and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compart patching mortar and finish to match adjacent concrete. Keep patched area continuously most for at least 72 hours.
 - Perform structural repairs of concrete, subject to Architect's approval, using poxy adhesive and patching mortar. E.
 - Repair materials and installation not specified above may approval. FIELD QUALITY CONTROL Testing and Inspecting: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports. F.

3.15

- Α.
- B. Inspections:
 - Steel reinforcement placement. 1.

RSC Project No.73.19.002

CAST-IN-PLACE CONCRETE

- 2. Steel reinforcement welding.
- 3. Headed bolts and studs.
- 4. Verification of use of required design mixture.
- Concrete placement, including conveying and depositing. 5.
- Curing procedures and maintenance of curing temperature. 6.
- Verification of concrete strength before removal of shores and forms from beams and 7. slabs.

PRINK, Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd. (4 cu. m), plus one set for each additional 50 cu. yd. (19 cu. m.) or fraction thereof.

- Shimp: ASTM C 143/C 143M; one test at point of placement for each composite sample, 2. but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
- Air Content: ASTM C 231, pressure method, for normal-weight concrete; one test for 3. each composite sample, but not less than one test for each day's pour of each concrete mixture.
- Concrete Temperature ASTM C 1064/C 1064M; one test hourly when air temperature is 4. 40 deg F (4.4 deg C) and below and when 80 deg F (27 deg C) and above, and one test for each composite sangle.
- Compression Test Specimens: ASTM C 31/C 31M. 5.
 - Cast and laboratory cure two sets of two standard cylinder specimens for each a. composite sample.
 - Cast and field cure two sets of two standard cylinder specimens for each composite b. sample.
- Compressive-Strength Tests: ASTM C 39709M; test one set of two laboratory-cured 6. specimens at 7 days and one set of two specimens at 28 days.
 - Test one set of two field-cured specimens at 7 days and one set of two specimens at a. 28 days.
 - A compressive-strength test shall be the average compressive strength from a set of b. two specimens obtained from same composite sample and tested at age indicated.
- When strength of field-cured cylinders is less than 85 percent of companion laboratory-7. cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
- Strength of each concrete mixture will be satisfactory if every average of any three 8. consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive trength by more than 500 psi.
- Test results shall be reported in writing to Architect, concrete manufacture and 9. Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain (N) Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

- 10. Non-destructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
- 11. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
- Additional testing and inspecting, at Contractor's expense, will be performed to determine 12. compliance of replaced or additional work with specified requirements.

end of section as with the management of the man

OP INK

SECTION 116800 - PLAY FIELD EQUIPMENT AND STRUCTURES

PART 1 - GENERAL

WORK INCLUDED

Provide all equipment and materials, and do all work necessary to furnish and install the athletic equipment, as indicated on the drawings and as specified herein. Athletic equipment shall include, but not be limited to:

Enclosed Dugout.

- Engineered Barrier Net Backstop (Alternate #2)
- 1.2 RELATED W
 - Examine contract documents for requirements that affect work of this section. Other A. specification divisions and sections that directly relate to the work of this section include, but are not limited to:
 - Division 03 Concrete: Sections: Cast-in-Place Concrete 1.
 - Division 31 Earthwork; 2.

1.3 REFERENCES

- Comply with applicable requirements of the following standards. Where these A. standards conflict with other specified requirements, the most restrictive requirements shall govern.
 - National Federation of State High School Associations (NFHS) 1.
 - 2.
 - 3.
 - 4.
 - 5.

1.4 **SUBMITTALS**

- Manufacturers Product Data A.
 - 1.
- B. Shop Drawings
- ationar . iational Collegiate Aum. international Association of Athletics . American Sports Builders Association (ASBA) vanufacturers Data and Recommended Installation Requirements IITTALS facturers Product Data Provide manufacturers product data prior to actual field installation work for Architects or Owners representatives review. 1.

1.5 QUALITY ASSURANCE

Manufacturers warranties shall pass to the Owner and certification made that the A. product materials meet all applicable grade trademarks or conform to industry standards and inspection requirements.

PRODUCT DELIVERY AND STORAGE

Materials delivered to the site shall be examined for damage or defects in shipping. Any defects shall be noted and reported to the Owners representative. Replacements, if Accessary, shall be immediately reordered, so as to minimize any conflict with the struction schedule. Sound materials shall be stored above ground under protective cover or indoors so as to provide proper protection.

PART 2 - PRODUCT

OR INX

- 2.1 MANUFACTURERS
 - Manufacturers: Subject to compliance with requirements, provide products by the A. following available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - 1. Beacon Athletics.
 - 2. Sportsfield Specialties, Inc.
 - 3. Or Approved Equal.

2.2 PERFORMANCE REQUIREMENTS

Delegated Design: Engage a qualified professional engineer, as defined in Section A. 014000 "Quality Requirements," to design pole and found tons

2.3 ENCLOSED DUGOUT.

- BASE: ED8X48 Enclosed Dugout 8'W x 48'L as Manufactured and Supplied by: A. Sportsfield Specialties, Inc.; or Approved Equal.
- B. **DESIGN CRITERIA:**
 - 1. Building Code: ASCE 7-10
 - 2. Maximum Wind Speed Rating: 140mph, Exposure Category C
 - Maximum Ground Snow Load: 60psf 3.
 - Seismic Design: Category E, Ss=1.5g, S1=0.75g 4.
 - Roof Pitch: 2" Rise Back-to-Front 5.
- C. COMPONENTS:
 - 1. Enclosed Dugout:
 - **Overall Dimensions: See Drawings** a.
 - Wall Frames Fabricated of: b.

RSC Project No.73.19.002

PLAY FIELD EQUIPMENT

- 3-1/2" x 3-1/2" x 3/16" (0.1875") Structural Steel Tube, Fully 1) Welded Construction
- Vertical Columns Include Factory Pre-Drilled 8-1/4" x 8" x 5/8" (0.625") A36 Steel Base Mounting Plates
 - Maximum Allowable Spacing Between Rear Columns is a) Eight Feet (8') On-Center
 - Maximum Allowable Spacing Between Front Columns is b) Sixteen Feet (16') On-Center
- 18 Gauge Galvanized Steel Track and Studs, 16" On-Center (In Wall)
- Roof Frame Fabricated of:
- NORMAT, 2) 3-1/2" x 3-1/2" x 3/16" (0.1875") Structural Steel Perimeter and Transverse Roof Tubes, and 3" x 2" x 11 Gauge Structural Steel Longitudinal Roof Tubes
 - Fully Welded Construction
 - Structural Steel Wall and Roof Frame Receives a Powder Coated Primer and Coated Finish, Various Standard and Custom Colors Available
 - Roofing Material is 29 Gauge, Classic Rib® Style Corrugated Metal with J-Channel Drip Cap Installed on Front and Sides, Varias Standard Paint Finish Colors Available
 - Exterior Siding: 5)
 - Standard SmartSide® Lap Siding (Metal Siding Available a) Upon Reguest)
 - Installed over QSB Sheathing and Housewrap b)
 - Finished Interior Walls: 6)
 - Interior Walls Covered with a Minimum Thickness of 1/2" a) (0.5") Medium Density Overlay (MDO) Fir Plywood Manufactured with 100% Waterproof Adhesives and Coated with Resin Treated Filter Overlay that Provides Smooth Painting Surface, Seams Seared with Caulk and Covered with Wood Batten Trim Strips
 - Interior Wall Surface and Wook Trim Hand Spackled, b) Sanded and Sealed with Exterior Grade Primer and Paint Finish
 - Includes Carbon Steel Anchoring Hardware, Epoxy and Lifting Eye 7) Bolts
 - PESDO Stamped and Sealed Drawings and Calculations by a Licensed d. Professional Engineer of Record in the State of Project Location
 - 2. Options:
 - EDSC Storage Closet a.
 - 1) Size: See Drawings
 - Fully Integrated with Enclosed Dugout 2)
- CUMENT 3) Includes One (1) 3'W x 6'-8"H Galvannealed 18 Gauge Steel Hollow Door with Honeycomb Flush Core, Galvannealed 16 Gauge Steel Door Frame, Three (3) Stainless Steel Hinges, One (1) Lever Handle and Lockset, One (1) Door Sweep, One (1) Closer, One (1) Threshold and One (1) Weatherstrip, Door and Door Frame Receive a Powder Coated Primer and Finish

RSC Project No.73.19.002

- i. Interior Walls Finished with Primed 7/16" Oriented Strand Board (OSB) Panels Attached 18 Gauge Flange Steel Studs
- ii. Optional Interior/Exterior Lighting, Electrical Outlets, Windows, Fully Finished Interior, and Scorer's Counter Available Upon Request

ENGINEERED BARRIER NET BACKSTOP (ALTERNATE #2)

BASE: Inline Lift & Tension Backstop w/ Beacon Wall as Manufactured and Supplied by: Beacon Athletics; or Approved Equal.

MPONENTS:

- Poles
- Corner
 - Ving
- termediate (as Required)
- 2. Concrete Piers
 - f_c=2,500 RSI a.
 - Base Nate and Anchor Bolts at Poles only. b.
 - Tie Bars at 12" O.C. c.
 - Vertical Rein Bark (3" Clear Cover) d.
 - 6"-8" Compacted Clear Stone Base e.
- Cables 3.
 - Top a.
 - Bottom b.
 - Vertical. c.
- 4. Lifting Winch
- 5. Lifting / Retrieval Line
- Beacon Wall 6.
 - Treated Lumber (behind wall pads) a.
 - b. Wood-less wall pad kit (145-100-100)
 - Color and Final Design by Owner. c.

PART 3 - EXECUTION

3.1 INSTALLATION OF EQUIPMENT

All Dugouts shall be installed as recommended per manufacturer's written instructions A. and as indicated on the drawings. Concrete anchoring foundations to be determined by others based on local soil conditions and building codes. Installer should have MENT minimum of five (5) Dugout installations or similar experience in the previous three (3) years.

END OF SECTION 116800

•	SECTION 126313 - STADIUM AND ARENA BENCH SEATING			
)	PART 1	- GENERAL		
	1×	SUMMARY		
	A	Section includes: Metal bleacher seating system. Custom metal bleachers.		
	1.2	PREINSTALLATION MEETINGS		
	А.	Preinstallation Conference: Conduct conference at Project site.		
	1.3	ACTION SUBMITTALS		
	A.	Product Data: For each type of product.		
	B.	Shop Drawings: For bench seating.		
		1. Seating Layout: Show seating layout, aisle widths, aisle-end alignment or stepping, and row-lettering scheme.		
	C.	Samples: For each exposed product and for each color and texture specified.		
	1.4	INFORMATIONAL SUBMITTALS		
	А.	INFORMATIONAL SUBMITTALS Product certificates. Sample warranty.		
	B.	Sample warranty.		
	1.5	CLOSEOUT SUBMITTALS		
	А.	Maintenance data.		
	1.6	QUALITY ASSURANCE		
	А.	Product certificates. Sample warranty. CLOSEOUT SUBMITTALS Maintenance data. QUALITY ASSURANCE Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.		

1.7 WARRANTY

- I. PART 2 PRODUCTS Special Warranty: Manufacturer agrees to repair or replace components of bench seating that A. fail in materials or workmanship within specified warranty period.
 - Warranty Periods: Five years from date of Substantial Completion.

- TAL BLEACHER SEATING SYSTEM
 - Basis of Design Product: Subject to compliance with requirements, provide product indicated A. on Drawings or comparable product approved by the Architect.

2.2 CUSTOM META BLEACHERS

Basis-of-Design Product: Subject to compliance with requirements, provide product indicated А. on Drawings or comparable troduct approved by the Architect.

2.3 ACCESSORIES

Row-Letter Plates: Manufacturer's standard A.

- Material: Clear-anodized aluminum with hack embossed characters. 1.
- Seat-Number Plates: Manufacturer's standard. B.
 - Material: Clear-anodized aluminum with black emboy 1. ed characters.
- C. Donor Plates: Manufacturer's standard.
 - 1. Material: Clear-anodized aluminum with black embossed char

2.4 **MATERIALS**

- А.
- B.
- Aluminum: Alloy and temper recommended ... finish indicated. Steel: Hot-dip galvanized after fabrication. Molded Plastic: High-density plastic, blow or injection molded, with surface that is mar and dent resistant. C.

- D. Fasteners: Aluminum, hot-dip galvanized steel, or stainless steel. Use fasteners of the same basic metal as fastened metal unless otherwise indicated. Use metals that are noncorrosive and OP MA compatible with each metal joined.
 - 1. Use concealed fasteners for interconnecting metal components and for attaching them to other work unless exposed fasteners are unavoidable.
 - For exposed fasteners, use tamper-resistant screws of head profile flush with metal 2. surface unless otherwise indicated.
 - Finish heads of exposed fasteners to match finish of metal fastened unless otherwise indicated.

Do not use power-actuated fasteners for concrete substrates.

- ALUNESUM FINISHES 2.5
 - Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker. A.

FABRICATION 2.6

- Seat-Plank Assembly: Assemble seat plank sections end to end to form continuous benches of Α. lengths indicated on Drawings, Provide tightly fitting aluminum end caps, interior joint sleeves at splices, and welded mounting plates for attaching support brackets.
- B. Backrest Assembly: Assemble backrest sections end to end to form continuous backrest surface of lengths indicated on Drawings. Provide tightly fitting aluminum end caps, interior joint sleeves at splices, and welded mounting plates for attaching to backrest brackets.
- C. Shop-Fabricated Connections: Welded according to WS standards by AWS-certified welders.

PART 3 - EXECUTION

3.1 **INSTALLATION**

Install seating in locations indicated and fasten to substrates according to pranufacturer's written A. installation instructions unless otherwise indicated.

VORX

- Install seating level, with uniform bench height above walking surface, and whout harp edges. B.
- Install seating level, when an Attach end caps tightly abutting ends of seat planks, with exposed end end end contour of seat planks. Space and attach seat-plank support brackets only to substrate concrete or structural components of metal substrates. C.
- D.
- E.

END OF SECTION 126313

SECTION 310000 - EARTHWORK

in the second PART 1 GENERAL

DEFINITIONS

A. The following terms shall have the meanings ascribed to them in this Article, wherever they appear in this Section.

PMA Earth Excavation: The removal of all surface and subsurface material not classified as rock (as defined below).

Rock Excavation, Unclassified: Rock excavation, unclassified shall mean removal of all rock, boulders or pieces of concrete, and solid ledge rock and masonry, requires for its removal, drilling and blasting, wedging, sledging, barring, or breaking up with a power operated tool. Soft or disintegrated rock which can be removed with a pick or power operated excavator or shovel, loose, shakeh or previously blasted rock, broken stone in rock fill or elsewhere, and rock exterior to the maximum limits allowed, or which may fall in the excavation, shall not be included as rock excavation. Pavements, curbs, gutters, sidewalks and driveways shall not be included as rock excavation.

- Subgrade Surface: Surface upon which subbase or topsoil is placed. 3.
- 4. Subbase: Select granular material or subbase course Type 2 which is placed immediately beneath pavement or concrete slabs.
- Maximum Density: The first unit weight in pounds per cubic foot of the soil at 5. "Optimum Moisture Content when determined by ASTM D 698 (Method C), and ASTM D 2922 (Method B). Landscaped Areas: Areas not covered by structures, walks, roads, paving, or
- 6. parking.
- Unauthorized Excavation: The removal of material below required elevation indicated on the Drawings or beyond literal dimensions indicated or specified 7. without specific written direction by Architect of Record.

1.2 **SUBMITTALS**

- A. Product Data:
 - Filter Fabric: Manufacturer's catalog sheets, specifications, and installation 1. instructions.
- B. Samples: Submit samples as follows. Take the samples in the presence of the Architect of CUMENT Record, and complete a Granular Material Sample Information Form for each samp
 - 1. Select Granular Material: 10 lb.
 - 2. Selected Fill: 10 lb.
 - 3. Subbase Course Type 2: 10 lb.

1.3 PROJECT CONDITIONS

EOP INAC A. Protect existing trees and plants during performance of the Work unless otherwise indicated. Box trees and plants indicated to remain within the grading limit line with temporary steel fencing or solidly constructed wood barricades as required. Protect root systems from smothering. Do not store excavated material, or allow vehicular traffic or parking within the branch drip line. Restrict foot traffic to prevent excessive compaction of soil over root systems.

Cold Weather Requirements:

When freezing temperatures are predicted, do not excavate to final required elevations for concrete Work unless concrete can be placed immediately. Retain enough earth over the bottom elevation of footings to prevent frost penetration. If excavation has progressed to final footing elevations and concrete cannot be placed immediately, cover the bottom of the excavations with protective material to adequately insulate the exposed earth surface from frost. Remove protective material immediately before placing concrete.

Do not backfill between November 1 and April 1, except with written permission 2. of Architect of Record.

PART 2 PRODUCTS

2.1 **MATERIALS**

A. Select Granular Material: Stockpiled, sound, durable, sand, gravel, stone, or blends of these materials, free from organic and other deletatious materials. Comply with NJDOT Standard Specifications for subbase course material.

Sieve	Percent Passing		
2 inch	100		
1/4 inch	30-65		
No. 40	540		
No. 200	01		

- Magnesium Sulfate Soundness Test: 20 percent maximum los by weight after 4 1. test cycles.
- 2.
- Plasticity Index: The purch sieve shall not exceed 5.0. Elongated Particles: Not more than 30 percent, by weight, con-retained on a 1/2 inch sieve shall consist of flat or elongated particles. A flat of elongated particle is defined as one which has its greatest dimension more than 3 times its least dimension. 3.
- B. Selected Fill: Sound, durable, sand, gravel, stone, or blends of these materials, free from organic and other deleterious materials.

Sieve	Percent Passing
4 inch	100
No. 40	0-70
No. 200	0-15

	Sieve	Percent Passing
	4 inch	100
$\mathbf{O}_{\mathbf{A}}$	No. 40	0-70
\sim	No. 200	0-15
1	Comply with NJDOT 2007 Standard S	l, crushed ledge rock or approved blast furnace sla Specifications for Subbase Course material.
	Sieve	Percent Passing
	2 inch	100
	1/4 inch	25-60
	No. 40	5-40
	N o. 200	0-10

- esjum Sulfate Soundness Test: 20 percent maximum loss by weight after 4 1. test cles.
- 2. Plasticity Inlex: The plasticity index of the material passing the No. 40 mesh sieve shall not exceed 5.0.
- 3. Elongated Paragetes: Not more than 30 percent, by weight, of the particles retained on a 12 in h sieve shall consist of flat or elongated particles. A flat or elongated particle is defined as one which has its greatest dimension more than 3 times its least dimension
- D. Suitable Material (Fill and Backfill for Landscaped Areas): Material consisting of mineral soil (inorganic), blasted or broken rock and milar materials of natural or man-made origin, including mixtures thereof. Maximum particle size shall not exceed 2/3 of the specified layer thickness prior to compaction. NOTE: Material organing cinders, industrial waste, sludge, building rubble, land fill, muck, and peat shall be considered unsuitable for fill and backfill, except topsoil and organic silt may be used as suitable pratrial in landscaped areas provided it is placed in the top layer of the subgrade surface.
- E. Filter Fabric (Separation, Drainage, Slope Protection): Amoco EF 4545, CEF 4551; Exxon Chemical Co. GTF 150 EX; Mirafi Inc. 140N, 140NL; Nicolon Cop. Filterweave 70/06; Phillips Fibers Corp. Supac 4NP, 5NP, 7NP; Wellman Quline Vac Q60, Q80, Q100 or approved equal.
- F. Filter Fabric (Stabilization): Amoco CEF 2002 & 2006; Exxon Chemical GO GTF 350; Mirafi Inc. 500X, 600X, 700X; Nicolon Corp. 500; Phillips Fibers Corp. Supara
- Mirafi Inc. 500X, 000A, 700 5WS, 6WS; Wellman Quline Inc. Q160 or approved Light Weight Fill and Backfill: Contractor is advised to follow the specifications of lightweight fill and backfill material if proposed under this project. The placement of this and 11 fill material must meet the requirements of the Geotechnical Engineer. G. Light Weight Fill and Backfill: Contractor is advised to follow the specifications of

PART 3 EXECUTION

YN,

3.1 UNDERGROUND UTILITIES

A. Locate existing underground utilities and service connections prior to commencing excavation Work. Determine exact utility locations by hand excavated test pits. Support and protect utilities to remain in place.

Remove inactive, abandoned utilities within the limits of the areas to be excavated. Cap or lug open ends of abandoned utilities extending outside the excavation limits.

- 3.2 EXCLUSION
 - A. Excavate earth as required for the Work.
 - B. Maintain sides and slopes of excavations in a safe condition until completion of backfilling. Comply with Code of Federal Regulations Title 29 - Labor, Part 1926 (OSHA).
 - C. Stockpile excavated materials classified as suitable material where directed, until required for fill. Place, grade, and slape stockpiles for proper drainage as approved by Architect of Record.
 - D. Footings and Foundations: Trim bottoms to required lines and elevations. Excavate to final elevations by hand just prior to concrete placement. Leave solid undisturbed base for concrete.
 - E. Pipe Trenches: Open only enough trench length to facilitate laying pipe sections. Unless otherwise indicated on the Drawings, excavate trenches approximately 24 inches wide plus the outside pipe diameter, equally divided on each side of pipe centerline. Cut trenches to cross section, elevation, profile, line, and grade indicated. Accurately grade and shape trench bottom for uniform bearing of pipe.
 - F. Unauthorized Excavations: Unless otherwise directed, backink unauthorized excavation under footings, foundation bases, and retaining walls with compacted select granular material without altering the required footing elevation. Elsewhere, backfill and compact unauthorized excavation as specified for authorized excavation of the same classification, unless otherwise directed by Architect of Record.

3.3 ROCK EXCAVATION

- A. No blasting shall be performed by the Contractor except upon written permission of Architect of record. Any request by the Contractor for permission to blast must be submitted to the architect of Record at least 24 hours prior to start of said proposed blasting.
- B. If blasting permission is granted, the Contractor shall adhere strictly to all required Federal, State and Local safety regulations. In no case shall blasting caps or other exploders be kept at

the same place where dynamite or other explosives are stored. A watchman shall be stationed at all times at the place of storage of explosives.

C. The prepared blast shall be carefully covered with a heavy woven wire blasting mat, placed so that the area affected by the explosion is positively confined. Should a gas, water or any other conduit intersect the line of trench, the rock must be removed without blasting from a distance of ten (10) feet on each side of such pipe or conduit.

The contractor shall be responsible for any damage to adjacent structures and property caused by his operations. He shall inspect all structures adjacent to the site of blasting and, when ordered by Architect of Record, he shall take clear, close-up photographs of these structures office and after blasting. Copies of these photographs shall be submitted to the Architect of Record Architect of record or their representative must be present at all times during blasting operations.

DEWATERING 3.4

^CP_{IN}

A. Prevent surface and subsurface water from flowing into excavations and trenches and from flooding the site and surjounding area.

3.5 PLACING FILTER FABRIC

A. Place and overlap filter fabric in accordance with the manufacturer's installation instructions, unless otherwise shown. Backfill over fabric in accordance with the manufacturer's instructions and in a manner to preven damage to the fabric.

3.6 PLACING FILL AND BACKFILL

- A. Surface Preparation of Fill Areas: Strip topsoil, enaiping vegetation, and other deleterious materials prior to placement of fill. Break up or schify old pavements to a maximum of 2 square feet.
- B. Excavations: Backfill as promptly as practicable, but only a approval by Architect of Record. Do not backfill with excavated material unless it meets the requirements of this Section.
- C. Place backfill and fill materials in layers not more than 8 inches thick in loose depth unless otherwise specified. Before compaction, moisten or aerate each layer as necessary to facilitate compaction to the required density. Do not place backfill or fill material on surfaces that are muddy, frozen, or covered with ice.
 - pechecal mpaction to the required domestical ldy, frozen, or covered with ice.
 Place fill and backfill against foundation walls, and in confined areas (luch as trenches) not easily accessible by larger compaction equipment, in maximum 6 inch thick (loose depth) layers.
 It fill against walls of 1.
- D. Prevent wedging action of backfill against structures by placing backfill uniformly around structure to approximately same elevation in each layer. Place backfill against walls of

structures containing basements or crawl spaces only after the first floor structural members are in place.

P N N F E. Landscaped Areas: Place suitable material when required to complete fill or backfill areas up to subgrade surface elevation. Do not use material containing rocks over 4 inches in diameter within the top 12 inches of suitable material.

Plastic Pipe and Cement Water Pipe in Trenches: Place cushion material a minimum of 4 inches deep under pipe, 4 inches on both sides, and 4 inches over top of pipe. Complete Nalance of backfill as specified.

Read Non-Metallic Conduit: Except where concrete encasement is required, place cushion material a minimum of 4 inches deep under conduit, 4 inches on both sides, and 12 inches over top or onduit. Complete balance of backfill as specified.

COMPACTION 3.7

- A. Compact each layer of fill and backfill for the following area classifications to the percentage of maximum density specified below and at a moisture content suitable to obtain the required densities, but at not less than 3 percent drier or more than 2 percent wetter than the optimum content as determined by ASTM D 698.
 - Structures: 95 percent. 1.
 - 2. Concrete Slabs and Steps. 95 percent.
 - 3. Landscaped Areas: 90 percent.
 - Pavements and Walks: 95 percent 4.
 - 5. Pipes: 95 percent.

3.8 GRADING

- A. Rough Grading: Trim and grade area required by this contract to a level of 4 inches below the finish grades indicated unless otherwise specified herein or where greater depths are indicated. Provide smooth uniform transition to adjacent areas
- B. Finish Grading: Finish surfaces free from irregular surface change, and as follows:
 - Grassed Areas: Finish areas to receive topsoil to within 1 help above or below 1. the required subgrade surface elevations.
 - 2.
 - the required Walks and Pavements: runce surface of areas to required line, grade and cross not more than 1/2 inch above or below the required subbase elevation. Building Slabs: Grade subbase material smooth and even, free of voids, compacted as specified to within 1/4 inch above or below required subbase alevation. 3.

- C. Spread approved topsoil directly upon prepared subgrade surface to a depth measuring 4 sod. Place to grow... 1. Approved existing topsoil within the Graumg ... additional topsoil from outside sources as required. Finish topsoil surface free of depressions which will trap water, free of stones over 1 inch in any dimension, and free of debris. inches after natural settlement of the topsoil has occurred in areas to be seeded or to receive

- performance of the Work to match the appearance and performance of existing corresponding surfaces as clearly as practicable.
- B. Topsoil and seed proof damaged lawn areas outside of the project area as directed. Water as required until physical completion of the Work.
- DISPOSAL OF EXCESS AND UNSUITABLE MATERIALS 3.10
 - A. Remove from the project site and dispose of excess and unsuitable materials, including materials resulting from clearing and grubbing and removal of existing improvements.
 - B. Transport excess and unsuitable materials, including materials resulting from clearing and grubbing and removal of existing improvements, to spoil areas away from the project site.

3.11 FIELD QUALITY CONTROL

Compaction ... by the contractor to and Compaction testing will be performed by project Architect of Record. If a compacted and well maximum density, the layer shall be recompacted and well material may be placed over a compacted layer until the specified densate...
PROTECTION
